

STAFF REPORT

CONCERNING APPLICATION FOR A CERTIFICATE OF APPROPRIATENESS

Date: May 6, 2019

Application Number: 2019-0329 Continued

Property Location: 1314 East Wayne Street

Architectural Style/Date/Architect or Builder: Neoclassical/1926/Whitcomb & Keller, H.R. Stapp

Property Owner: Valerie Schey and John Sherry

Landmark or District Designation: East Wayne Street, Ordinance #7796-87

Rating: Contributing

DESCRIPTION OF STRUCTURE/ SITE: Two and a half story Neoclassical house with a rectangular plan with one story addition on rear. House is elevated from street. Roof is slate shingles with gable returns, two small gable dormers in front with slate on sidewalls. A one-story wing has a low-pitched roof. Windows are primarily original wood 8/1 double hung with a paired 6/1 double hung in front center second story. There is a central pedimented entry with simple entablature, paired doric columns and pilasters at door. Façade is brick. There is a two car, two door brick gable roof garage in rear.

ALTERATIONS: COA 2016-0523 replaced 4' wood picket fence with 6' dog-eared wood privacy fence, in same fence line; RME 2012-0426 removed dead crabapple tree in rear yard; COA 1996-0917 replaced flat roof over kitchen with roof similar to roof over sunroom and replaced picket fence in kind; COA 1996-0618 constructed a low pitched hip roof over existing flat roof at sunroom at west end of house with membrane roofing and fiberglass shingle; COA 1996-0116 installed aluminum storm/screen combination windows to replace existing of sunroom; COA 1995-0616 removed storm damaged maple tree on tree lawn at the recommendation of Custom & Moore and the City of South Bend; COA 1994-0419 changed front door (saving and storing the original), installation of a screen door, installation of decorative shutters; COA 1994-0223 replaced five attic windows with the conditions that true divided light or applied exterior muntins be supplied by manufacturer and installed, all five original windows to be stored, applicant supply HPC with photo documentation of completed project.

APPLICATION ITEMS: *"New windows"*

DESCRIPTION OF PROPOSED PROJECT: Owner has applied for seventeen (17) original wood windows to be replaced with Renewal by Anderson Fibrex vinyl/wood composite windows. The windows proposed to be replaced are on the first and second stories of the main house; no new windows on the one-story wing; no new windows on the third story; no new windows in the rear addition.

At the April 15, 2019 meeting of the Historic Preservation Commission, the Commission expressed their position about determining the condition of the existing original window to the house. The Certificate of Appropriateness was "continued" to provide the owner with additional time to engage with window repair professionals to determine the condition of the existing windows and of the feasibility of repairing the existing windows.

Owner reported that two window repair providers have assessed their situation and determined that they are unable to handle the scope of repairs, a third has not responded to calls, and a fourth has provided a proposal for repair of the existing windows and storm windows, determining that the windows are not deteriorated beyond repair and at a lower cost than the proposed replacement.

Owner has supplied the following description of the problems they are having: some of the windows are warped and won't close, some of the windows have interior rot, there is water damage on the interior of some of the windows, some of them no longer open, and because of the misalignment caused by the above issues, the windows are very drafty. See email for additional information provided by owner.

From photographs provided by the owner and Renewal by Anderson, staff acknowledges visible peeling paint on the wood storm windows on the first story, some broken sash cords, intermittent glazing failure, and layers of paint

build up. ~~No determination has been made as to if the windows are deteriorated beyond repair. Staff recommends that the owner engage a window restoration professional to determine the condition of the windows and the feasibility for repair.~~

The proposed windows will be inserts, utilizing the existing jamb which commonly results in a slight reduction to the amount of glazing overall. Exterior trim will not be affected other than a “mini coil over the stops on the exterior”. The window pane pattern will be replicated for each window using “interior wood grilles”. Regarding the "grilles", in a 1994 COA, a conditional approval was made for the attic windows to be replaced with true divided light. To remain consistent with the precedent that approval set, if approved for replacement, Staff recommends the "full divided light" in lieu of the "interior grilles" so they replicate the depth of the original true divided light. With a replicated pane pattern and full divided light, the vinyl/wood composite windows resemble the original aesthetic look.

PRESERVATION INSPECTOR REPORT: On March 19, 2019, I visited the property located at 1314 E Wayne N. The property owner has begun the COA application process to replace windows on the structure. I had not received a detail of which windows were part of the application, so I created an inventory of the entire structure. I was instructed to inspect from the outside only as the owner has many dogs and she would provide interior photos. Every window has a storm window in place. As a result, I am unable to make a determination on the condition of the windows in their current state. Several of the wood storms on the first floor appeared to be ajar or not closed tightly as the photographs will indicate.

North (front)

Third floor-

Two casement windows in dormers, look to be replacements with flat gridwork

Second floor-

Four double hung windows with aluminum storms. Look to be original with divided (2)6/1 and (2)8/1 light pattern

First floor-

Four double hung windows with wood storms. Look to be original with divided 8/1 light pattern

Basement-

Two vinyl

East (left side from street)

Third floor-

Half-moon with flat gridwork, not original

Second floor-

Two double hung windows with aluminum storms. Look to be original with 8/1 light pattern

First floor-

Two double hung windows with wood storms. Look to be original with 6/1 light pattern

One replacement window, ill-fitting with spacer to fill void

Basement-

One vinyl

West (right side from street)

Third floor-

Two quarter round windows, ill-fitted replacements with flat divisions

Second floor-

Two double hung windows with aluminum storms. Look to be original with 6/1 light pattern

First floor-

Addition has Eight total replacement double hung windows with flat grid 8/1 pattern. These also have aluminum storm windows

South (rear of house from street)

Third floor- no windows

Second floor-

Three double hung windows with aluminum storms. Look to be original (2) 6/1 and (1) 8/1 pattern

First floor-

One double hung window with wood storm. Looks to be original with 8/1 pattern

Rear addition-

Triple window bay non-original window

STANDARDS AND GUIDELINES: EAST WAYNE STREET

II. EXISTING STRUCTURES

A. WINDOWS AND DOORS

Window and door frames are of wood or steel (some casements) or in the case of brick structures, stone sills and brick lintels. Where metal or vinyl siding has been applied, window trim has been covered. Storm windows are of wood and aluminum.

Required

Original windows and doors shall be retained including sashes, lintels, sills, shutters, decorative glass, pediments, hoods, and hardware. When deteriorated beyond repair, they shall be replaced with units and trim resembling the original

Recommended

Wood frame storm windows and doors painted to match the original should not be used but should not damage existing frames. If new sashes or doors are installed, the existing or original materials, design, and hardware should be used. When metal storm doors are used they should be painted, anodized or coated to match the existing. When awnings are used they should be of canvas material.

Prohibited

Original doors, windows, and hardware shall not be discarded when they can be restored and used in place. New window and door openings which would alter the scale and proportion of the building shall not be introduced. Inappropriate new windows and door features such as aluminum insulating glass combinations that require removal of the original windows and doors shall not be installed.

Not Recommended

Awnings, hoods, and fake shutters made of metal, vinyl, or fiberglass should not be used if they would detract from the existing character or appearance of the building

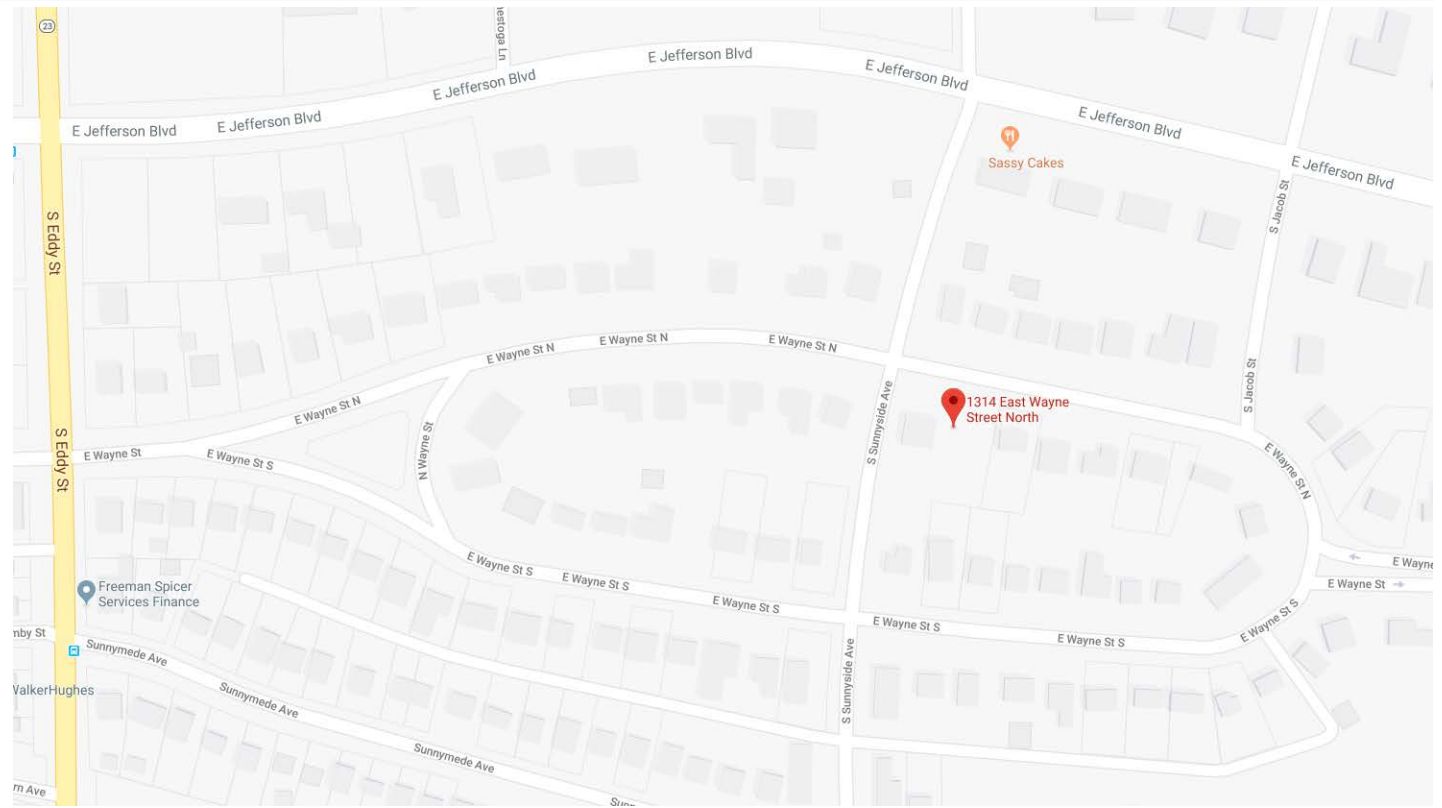

STAFF RECOMMENDATION: ~~Although the proposed windows resemble the original, without a determination that the original windows are deteriorated beyond repair or that a repair is not economically feasible, per the Standards for East Wayne Street Local Historic District, Staff does not offer a recommendation to the Commission.~~

Staff does not recommend the proposed project.

Hi, Elicia:

Our Friday appointment was met, and the contractor's proposal is attached to this note.

The restoration estimate is slightly lower than the replacement cost, but is a base bid that suggests that costs could rise as complications reveal themselves once work is underway. The completion time for the restoration process is FAR longer than the replacement time, and would disrupt our household for at least 3 weeks, assuming that the work can be completed in a timely manner. Given our work schedules, and the fact that we do much of our work out of our home, this on-site disruption represents a considerable burden. Further, the stress to our five dogs (and concomitant noise level) that the prolonged project would cause seems an unreasonable hardship. Finally, restoration could not begin until late summer or early fall, which would deprive us of much of the seasonal benefit we hoped to derive by replacing the windows.

Given these circumstances, we ask you to approve our request to replace these windows so we can get the project underway.

Thanks,

John

Hi, Elicia:

Working from your list of window repair resources has proven to be a frustrating exercise. 2 different service providers have assessed our situation (which required each of us to reschedule large portions of our workdays) and determined that they are unable to handle the scope of repairs. Another service provider has not responded to our calls. A fourth service provider is unable to make a house call until this coming Friday, which is several days beyond the 1 May deadline.

If you are willing to extend the deadline a bit, we'll keep this appointment and see what the estimator has to say. If not, we hope that you will accept that we have made a good faith effort to comply, and approve our request to replace the windows. In any event, we'd like to have an up or down decision at your next meeting, so we can get on with improvement projects around our house.

Thanks,

John

Dear Elicia,

This is a last note to round out the discussion of our prospective window replacement before your board meets on the 15th. I have attached photos from the interior of our windows.

We deeply appreciate the historic appearance of our neighborhood. We believe we can vastly improve the structure and function of our dilapidated windows in an aesthetically harmonious way.

South Bend, IN 46615

Re: Wood Window Restoration

We propose to furnish the necessary labor, material and equipment to complete the above referenced project.

Scope of Work – (17) Window Openings

1. Remove window sashes. Repair damaged ropes, pulleys and weights.
2. Reglaze fixed windows and sashes 100%.
3. Prep and paint windows and sashes.
4. Prep and paint (4) wood storm windows on the north elevation.
5. Remove failing caulk and re-caulk at (13) aluminum storm window frames.
6. Daily cleaning of our work area.

Base bid: \$21,640.00

Clarifications

1. Working hours to be 7 AM to 5 PM. We expect to be on-site for 3 weeks.
2. Scopes of work not included: repair/painting of wood trim.
3. This proposal is valid for 30 days.

Should you have any questions or concerns, do not hesitate to contact me at any time.

Sincerely:

H. G. Christman Construction Company, LLC

Valerie -

Questions 1 - 4 have been answered by Ryan and he has provided a document that shows from the inside which windows are being replaced that correlates with the description; this is helpful to confirming that the window pane pattern will replicate the current configuration. A site plan noting which windows would help to clarify the location of the replacement windows.

Regarding the "grilles", in a 1994 COA, a conditional approval was made for the attic windows to be replaced with true divided light. To remain consistent with the precedent that approval set, we will recommend the "full divided light" in lieu of the "interior grilles" so it replicates the depth of the original true divided light.

The photographs embedded in Ryan's document can be used in the Staff Report, however, they do not show the deteriorated conditions (I could see some glazing failure and broken ropes). Please let me know if you intend to send additional photos to be considered in making the case for the condition of the existing windows being "deteriorated beyond repair", per the Standards.

Thank you,

Elicia

Subject: RE: Elicia - for your review

Valerie -

HP Inspector, Steve, has filed a site visit report and the exterior photographs of the windows. Steve was unable to determine the condition of the windows from the exterior, especially due to the fact that they do have storm windows. Your photographs of the interior of the windows that you have applied to replace are vital to be able to ascertain the condition and make a Staff Recommendation to the Commission; please see COA application, page 2, Inspection Authority.

As for other necessary Required Documents, COA application, page 3, we will need a Site Plan or diagram that shows which windows are proposed to be replaced. On your contract with Anderson, there is an Itemized Order Receipt that lists and ID# and Room description; perhaps this can be mapped out.

Regarding Written Description and Materials to be used, the questions I have are as follows:

1. Will the new windows be Inserts or full frame?
2. Will the new windows be installed from interior or exterior? If exterior, how will exterior trim be affected?
3. Will the new windows be full divided light?
4. Many of your existing windows have an 8/1 light pattern. The windows above your front door are 6/1. Will the pattern of the "grille style" be the same as each window being replaced? If not, which ones will be different?

You can disregard the checkbox for Blueprints.

We would need the information by April 1 to be deemed a complete application for the April 15 HPC meeting agenda. Please let me know if you have any questions.

Thank you!

Elicia

Hi Elicia,

Thank you for this information.

The windows are actually a composite material and not clad windows. The material seems to be a more durable material than the clad option.

Would you like for me to send you information about how they are made? Maybe that would be helpful for all members of the HPC.

I will submit my COA tomorrow.

Thanks,

Val

Subject: RE: Elicia - for your review

Hi Valerie -

Thank you for contacting me again about your project and Certificate of Appropriateness application. The Commission typically doesn't require the contract and only rarely discusses pricing of application items so we can just remove those pages from the pdf, no problem.

When making the application, it is important to convey that the condition of the existing windows are "deteriorated beyond repair" and that the proposed replacements "resemble the original", per the Standards. My understanding is that the existing windows are primarily original wood with an 8/1 divided light pattern. The Standards do not prohibit vinyl windows but it is important that I make you aware that the Commission prefers aluminum-clad over vinyl-clad so they may ask if you've explored that option. They may also ask if you've received quotes to repair the existing and for adding storm windows. It is helpful to have a response to their inquiry during the Commission meeting. As an fyi, there is an approved COA in the file from

1994 approving replacement of 5 attic windows with a condition that the muntin/grid was true-divided light.

The deadline to apply for the April 15 HPC meeting will be April 1. There are currently two COAs on the April agenda.

Thanks!

Elicia

Importance: High

Elicia,

As I mentioned, John and I want to install new windows.

We have contacted Andersen, and attached is the contract they provided us for custom made windows.

Because of the private information on the contract, I DO NOT want this contract to be shared publicly with the Historic Preservation Commission.

Before I complete the COA, can you tell me if I will be required to share our contract publicly?

Thank you,

Valerie Schey

Dear Elicia,

This is a last note to round out the discussion of our prospective window replacement before your board meets on the 15th. I have attached photos from the interior of our windows.

We deeply appreciate the historic appearance of our neighborhood. We believe we can vastly improve the structure and function of our dilapidated windows in an aesthetically harmonious way.

Just a few years ago, we invested almost \$20,000.00 to repair our slate roof and install copper gutters, to conform to the codes for the historic district. We have also upgraded to an expensive energy efficient furnace, to be more ecologically considerate. Our current windows are so damaged and inefficient that we suffer with cold drafts in the wintertime, and warm zones in the summertime in the vicinities of the windows, which causes our heating and cooling costs to skyrocket in these seasons. Some of the exterior windows are warped and rotted; they will no longer close flush to the frame. There is water damage on some of the interior windows as well. Also, a number of windows can no longer be raised. Finally, the existing windows are mismatched, with some of them having storms and screens, and some of them not. We have attached photos to illustrate some of this damage.

The windows we propose to install are energy efficient, and would solve these problems while still maintaining a historically appropriate appearance, complete with muntins. We have carefully researched our choice of renewal vendors, and are confident that Andersen, a firm that has worked with the historic commission in the past, will do an outstanding job of approximating our existing look. The new custom windows align with the city's increased emphasis on sustainability. Our contractor, Mr. Ryan Brown, has already been in touch with you about most of these details.

Please let us know if there is any other information you would like us to provide to assist in your deliberation. We will be present for the hearing and can address any additional questions that might arise at that time.

Best,
John Sherry

DOUBLE-HUNG WINDOW

ADVANTAGES AND APPLICATIONS

A double-hung window consists of two vertically sliding sash in a single frame. Both sash are counterbalanced by a spring-powered block-and-tackle balance mounted on the side of each sash. Tilt latches for each sash allow inward tilting for easy cleaning. Upper and lower sash are securely closed by use of a cam-type sash lock. An insect screen is installed into the outside track.

*Double-Hung
Replacement Windows*

ADVANTAGES

- Both sash can be operated for ventilation at top and bottom of window.
- Both sash can be tilted inward for easy cleaning.
- Patented Fibrex® material is stronger than vinyl, providing greater durability.
- Fibrex material with low-maintenance capstock gives a rich, low-luster finish to sash and frame, similar to painted wood.
- Smooth radius surfaces on the frame and sash are pleasing to the eye and easier to clean.
- Mortise-and-tenon appearance on the interior and exterior sash corners gives a traditional, hand-crafted look.
- Full-perimeter weatherstrip provides superior weathertightness while still allowing easy sash operation.
- Sash are counterbalanced by a spring-powered block-and-tackle balance mounted on the side and matched to the weight of each individual sash.

APPLICATIONS

- Excellent choice for homes and condominiums where traditional styling is important; appropriate for many restoration projects.
- Suitable in areas facing walkways, decks and other traffic areas because sash do not project outward.
- Convenient in areas where the sash need to be cleaned from the interior.
- Visually compatible with other Renewal by Andersen® products.

EXPLODED VIEW

STANDARD FEATURES

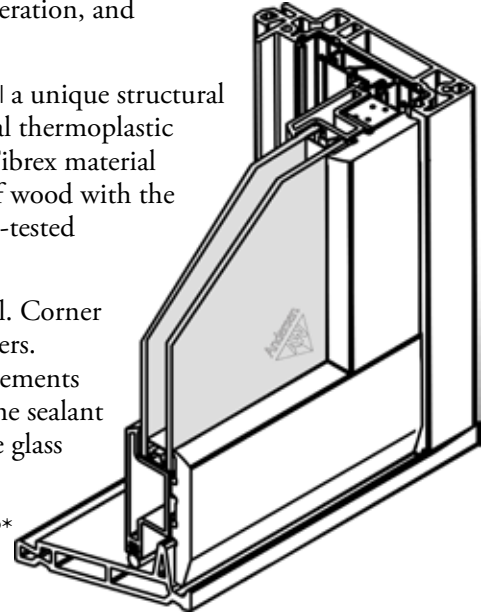

DOUBLE-HUNG WINDOW

A sloped sill insert double-hung window corner section is shown here, though **standard features are the same as for flat sill insert or full-frame** double-hung windows.

Described below are features that contribute to the double-hung window's low maintenance, energy efficiency, ease of operation, and pleasing appearance.

- **Frame** – Made of rigid Fibrex® material a unique structural composite of wood fibers and a special thermoplastic polymer. Developed by Andersen®, Fibrex material combines the strength and stability of wood with the low-maintenance features of our time-tested Perma-Shield® cladding.
- **Sash** – Constructed of Fibrex material. Corner keys provide durable, watertight corners. The mortise and tenon joinery complements the frame. A high-performance silicone sealant provides a watertight seal between the glass and sash.
- **Glazing** – High-Performance™ LoE⁴* glass with an inert, energy-efficient gas, is standard for every window. See Options on page 3-6 for other glass choices.

*LoE⁴ is a registered trademark of Cardinal IG Company.

- **Glass spacer** – The patented low-conductivity spacer is made of stainless steel and resists heat transfer four to five times better than aluminum spacers used by many other manufacturers.
- **Low-maintenance exterior coating** – A highly durable microscopic coating of titanium dioxide (TiO₂) is applied to the exterior glass surface during the glass manufacturing process. High-Performance Low-E4™ glass is self-activating by exposure to sunlight. When activated by sunlight, it loosens dirt, dust and organic material which are then washed away by rain. The glass dries faster and reduces water spotting by up to 99%. (See photo on this page.)

The unique exterior coating works similarly to a rechargeable battery. Once the coating is activated or “charged,” it will hold its activation for some time. The more sunlight it receives, the better the activation. When re-exposed to sunlight, the coating will recharge after periods of lower sunlight levels.

Regular Glass

High-Performance™ Low-E4™ Glass

STANDARD FEATURES, cont.

DOUBLE-HUNG WINDOW

- **Removable protective film** – Packaging features a clear protective film that is factory applied to both the interior and exterior glass surfaces to help protect the glass from shipping and installation damage.
- **Weatherstrip** – A dual system of a foam-filled bulb applied to the sash frame and a constant-force low-friction weatherstrip applied to the frame provide a tight seal.

- **Sash Lock and Keeper** – The zinc die cast dual cam-type sash lock, mounted at center of the meeting rail on the interior sash, engages easily into the keeper mounted on the center of the meeting rail on the exterior sash. The Double-Hung Window Component Color Combination Chart on page 3-11 shows the hardware color for each window color combination.

OPTIONS

DOUBLE-HUNG WINDOW

*Traditional Fibrex Material
Square Check Rail*

The following options are available for all Renewal by Andersen® double-hung windows:

- **Dual-Colors and Stainable Wood Interior Veneers** – Dual-color windows are available that have different interior and exterior colors. Stainable wood interior veneers are also available in oak, maple, and engineered pine. The Double-Hung Window Component Color Combination Chart on page 3-11 shows available color combinations and the default color of individual components for these combinations. Alternative component (e.g., insect screens, grilles, hardware, side jams) color combinations are available upon request.

Painting and staining guidelines for Fibrex® material and stainable wood interiors are available in this manual, the *Product Installation Manual* and in the *Care and Maintenance Guide*.

- **Traditional Square Check Rail** – Optional square-shaped check rail available in oak, maple, engineered pine veneer and Fibrex material interior finishes offers a classic flat surface appearance. These classic lines create the old world look, using the advanced technology of today. This option can be used with any other double-hung lock components or grille accessories.
- **Rounded Contemporary Check Rail** – Original rounded contemporary check rail is still available (as an option) in same color and wood species.
- **TruScene® Insect Screen** – Micro-fine stainless steel mesh (25 x 25 per inch mesh) that provides over 50% more clarity than standard Andersen insect screens.

OPTIONS, cont.

DOUBLE-HUNG WINDOW

Double-Hung Window	Full Insect Screen	All sash ratios	Restrictions All heights available for unit widths less than or equal to 50-1/4". All widths available for unit heights less than or equal to 48-5/8".
Double-Hung Window	Half Insect Screen	All sash ratios	All sizes available, no restrictions

- **Aluminum Insect Screen Cloth** – Durable aluminum screen cloth (18 x 16 per inch mesh) in a glare-resistant charcoal gray.
- **Half Insect Screen** – A half insect screen is available that only covers the lower sash. The half screen does not impede the operation of the upper sash.
- **Decorative Glass Patterns** – Standard windows have no textured glass pattern whatsoever. Optional textured patterns are as follows:
 - Obscure (not available on double-hung windows taller than 86")
 - Reed
 - Cascade
 - Fern (not available on double-hung windows wider than 50-5/16")
- **Glass Coating** – High-Performance™ Low-E4™ coating is standard with all windows. Optional glazings are as follows:
 - Clear (no coating)
 - SmartSun™
 - High-Performance Low-E4 Smart Sun™ tinted coating
 - High Performance® Low-E4 Smart Sun™ with Heatlock™

* High Performance® Low-E4 Smart Sun™ with Heatlock™ not available with decorative glass patterns
- **Tempered Glass** – Tempering is an option for all available glass options. Untempered glass is standard.

Unavailable Glass Patterns		
Pattern	on windows wider than	or windows taller than
Reed*	56-7/8"	100-7/8"
Cascade*	56-7/8"	84-7/8"
Fern	56-7/8"	84-7/8"
Obscure	56-7/8"	84-7/8"

* Pattern is directional

When finger lifts are desired, order the window with **no** lifts. Finger lifts are then installed in the field after the window installation.

- **Glass Breather Tubes** – Breather tubes are available for glass intended for high-altitude installations. It is important to note that breather tubes will decrease the thermal performance of the unit. Refer to the Technical Data (Section 8) in this Spec and Tech Manual for altitude specifics.
- **Sash Lock** – A single zinc-cast metal lock is available in White, Stone and Canvas colors. Units narrower than 22-13/16" have a single lock. For units 22-13/16" wide or wider, a second lock is available as an option. For units wider than 45-9/16", a second lock is required.
- **Sash Lift** – One or two sash lifts may be mounted to the bottom rail of the lower sash. Can be specified, available in White, Stone, or Canvas colors or Estate™ finishes.
- **Estate™ Finish Hardware** – Estate finish hardware is available for all operating windows and is available in high performance bright brass, antique brass, high performance satin nickle, distressed nickel, brushed chrome, polished chrome, distressed bronze, oil-rubbed bronze and dark bronze. Hardware in each of the finishes is electroplated and/or modified to obtain the desired look. The Estate hardware components for double-hung windows are listed below:
 - **Lock and Keeper** – The zinc cast, plated lock and keeper provide elegant Estate styling that beautifully complements not only the window, but matches any Estate hardware found on Andersen® patio doors.
 - **Hand Lift** – Similar to the standard lift, the Estate hand lift provides an easy gripping surface with which to operate the window.
 - **Finger Lifts** – These smaller, more traditional looking lifts provide a different aesthetic option for a grasp to operate the window. These lifts are typically used in pairs.
 - **Opening Control Device** – Field-applied device restricts sash opening to 4 inches. This device will allow full sash opening when disengaged and will re-engage when sash is closed.

DOUBLE-HUNG WINDOW

Available Grille Types

Three grille types are available. The interior and exterior sides of the grilles are color-coordinated with each side of the window frame. Consult the color combination charts in each window product section for detailed color information.

Grille-between-the-glass (GBG)

Interior wood grille (INTW)

Full divided light (FDL)

Grille-Between-the-Glass (GBG)

Sculpted aluminum grille members are manufactured between the glass panes, and are available in two widths. Enamel finish replicates interior and exterior face of window. If wood interior, interior facing surface will be gray.

Interior Wood Grille (INTW)

With the option of hardwood maple or oak, these grilles snap into clips placed around the interior side of the sash and may be removed to clean the glass. These high-definition interior wood grilles are available in two different widths.

Full Divided Light (FDL) Grille

FDL grilles provide the classic look of a true divided light window. The high-definition exterior grille is made from Fibrex® material and is available in two different widths. Between the glass panes, an aluminum spacer stands slightly away from each pane to maintain thermal performance. The high-definition interior wood grille is available in hardwood, maple or oak and in two different widths, and may be permanently applied or removable.

OPTIONS, cont.

DOUBLE-HUNG WINDOW

- Available Grille Patterns – Grille pattern options include colonial, prairie, and modified prairie.

COLONIAL

Refer to colonial pattern grilles by pattern name and “grille lites wide by grille lites high” for each sash. For the examples shown, the left window would be “colonial pattern, 3 by 2, upper and lower sash”. For the example to the right, “colonial pattern, 3 by 1 on the upper sash, no grille on the lower sash”.

PRAIRIE

Regardless of sash size, all prairie grilles intersect to form 4" squares of visible glass in the corners of the sash. Prairie grilles are available on one or both sash.

The prairie grille pattern is not available on double-hung windows narrower than 20”.

MODIFIED PRAIRIE

Regardless of sash size, all modified prairie grilles intersect to form 4" squares of visible glass. Modified prairie grilles are available for one or both sash.

The modified prairie grille pattern is not available on double-hung windows narrower than 20”.

OPTIONS, cont.

DOUBLE-HUNG WINDOW

- **Exterior brick mould** – Fibrex® material brick mould is available in two configurations, picture frame and traditional style, as an exterior trim option for full-frame windows. Brick mould is available on insert frame windows in picture frame style only.
- **Overfit brick mould** – Fibrex material is available as an exterior trim option for insert flat sill only windows in picture frame style.

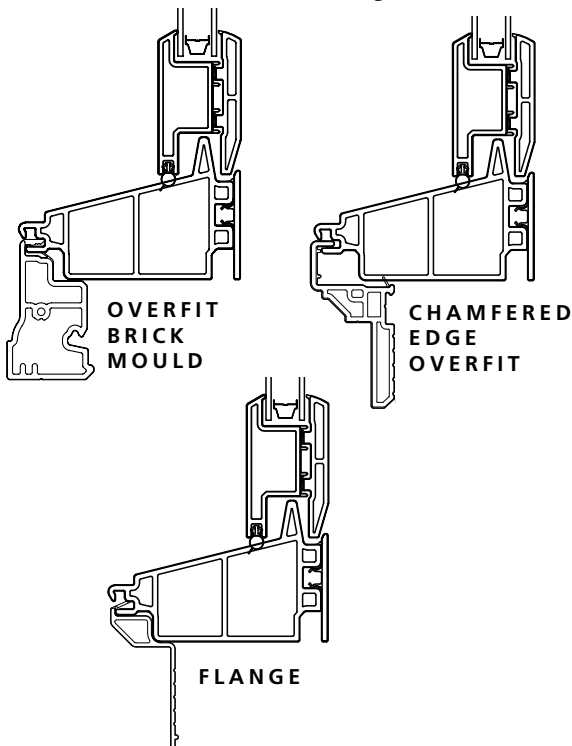

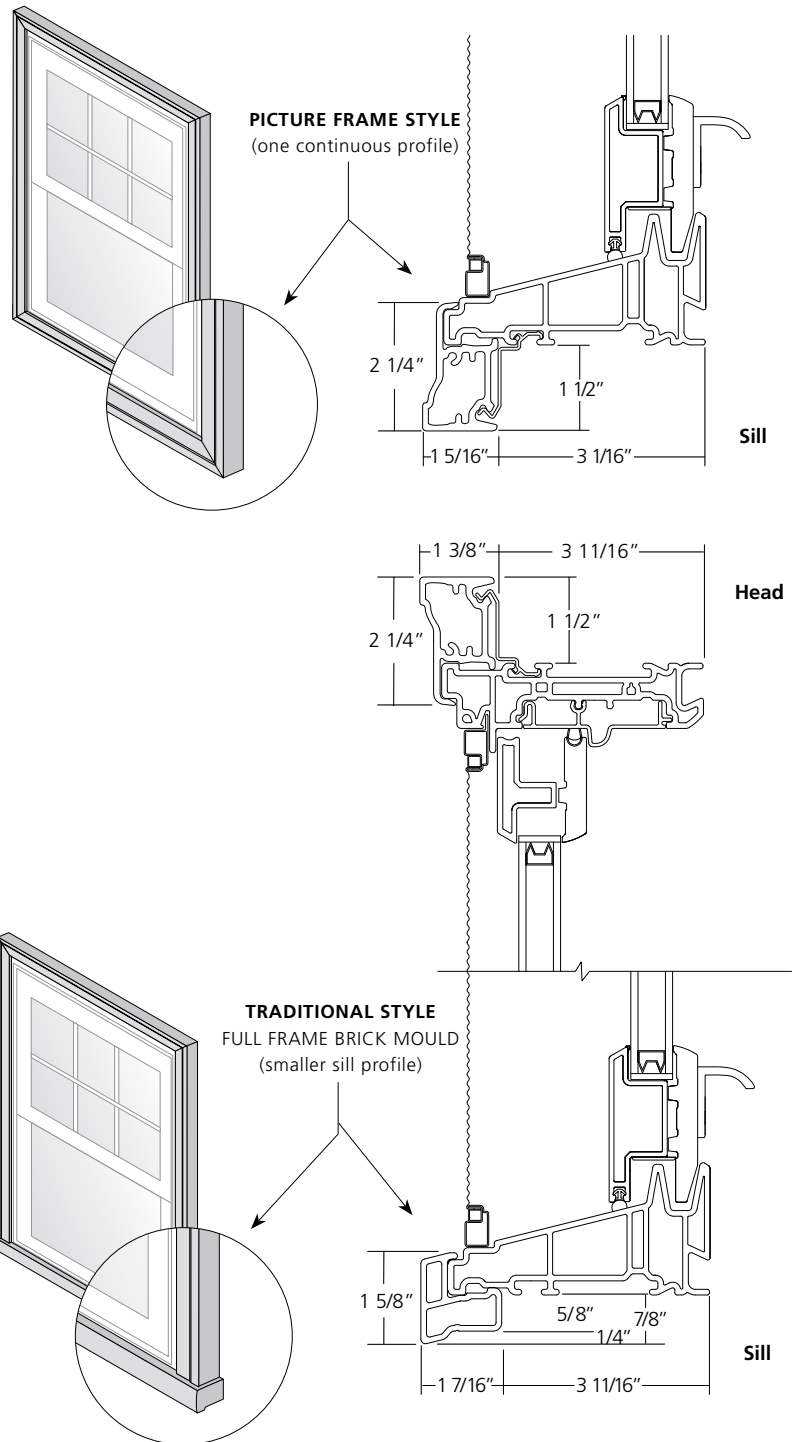

FULL-FRAME BRICK MOULD

Full-frame brick mould is available in two configurations:

- **Picture Frame Style** – The same brick mould profile is used all the way around the window.
- **Traditional Style** – A thinner sill profile that runs completely under the side brick mould pieces is used reminiscent of old, traditional window installations.

INSERT-FRAME BRICK MOULD

- **Overfit Brick Mould** – Fibrex material overfit brick mould is available as an exterior trim option for insert (flat sill only) window in picture frame style.
 - Overfit Flange
 - Chamfered Overfit Flange

Alternative component and grille color combinations for each frame/sash color are available upon request

* Wood interiors available in: pine, maple and oak
 ** Pine and maple interiors will use maple species interior grilles. Oak interiors will use oak species interior grilles

Side jamb weatherstrip/sash tracks

SLOPED-SILL INSERT DOUBLE-HUNG WINDOW

When the old window frame is solid and/or interior or exterior trim needs to be saved, an insert window installation is appropriate. These installations are also typically less disruptive to the home. A typical installation requires removing the old sash and any interfering hardware or trim from the existing window frame.

The insert frame has an exterior trim kerf to facilitate the use of exterior trim or aluminum coil stock. The 14° sill angle and 3-3/16" frame width fit within the 3-1/4" pocket that many old window frames have.

MIN / MAX SIZES

DOUBLE-HUNG WINDOW | SLOPED SILL INSERT

Certain window sizes may have limited sash travel. Refer to the charts on the following page, or call a customer service associate, or see the RbA Extranet for detailed information on limited sash travel and egress conformity in specific window applications.

Custom check rail heights may be specified to achieve different visible sash ratios, via NSPR.

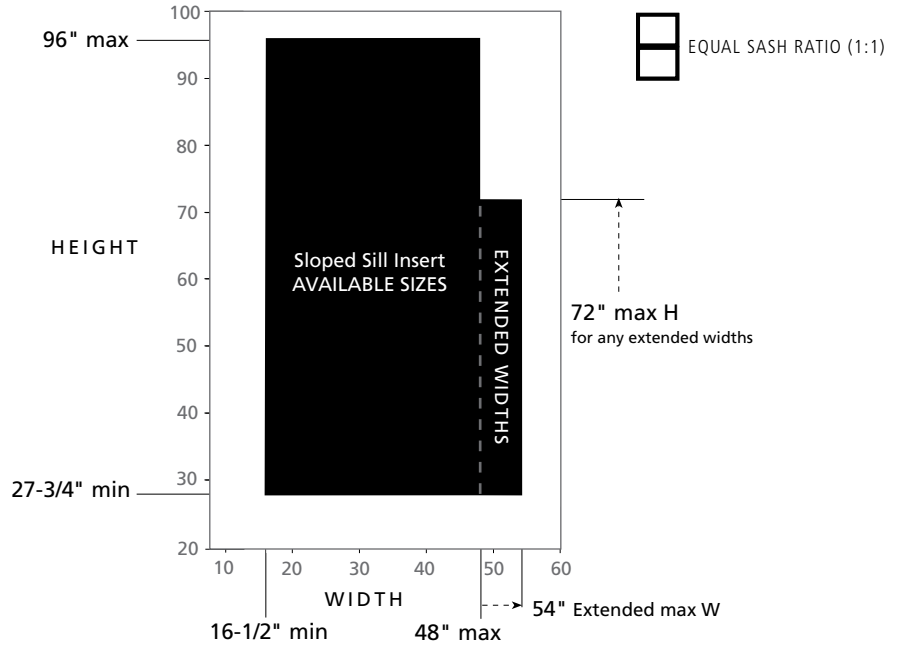

Do not confuse sash ratio and colonial grille pattern designations. Sash ratio refers to the size relationship between upper and lower sash. Grille pattern refers to the number of lites in a colonial pattern grille.

*** Two locks required on units greater than or equal to 45-9/16"**

**** Two locks not available on units narrower than 22-13/16"**

***** A second lock is available as an option for units greater than 22-13/16"**

CLEAR OPENING AND CLEAR GLASS DIMENSIONS
 DOUBLE-HUNG WINDOW | SLOPED SILL INSERT

To determine the clear opening dimensions or clear glass size of either sash, follow the steps below.

1. Determine **Unit Width (W)** and **Unit Height (H)**.

2. Determine the appropriate **Check Rail Height (CRH)**:

Sloped Sill Double-Hung Check Rail Height (CRH)	
 EQUAL (1:1) Sash Ratio	Check Rail Height = $\left(\frac{\text{Height}}{2}\right) - 0.874$
 COTTAGE (2:3) Sash Ratio	Check Rail Height = $\left(\frac{\text{Height} \times 2}{5}\right) - 0.25$
 COTTAGE (2:4) Sash Ratio	Check Rail Height = $\left(\frac{\text{Height}}{3}\right) + 0.161$
 REVERSE COTTAGE (3:2) Sash Ratio	Check Rail Height = $\left(\frac{\text{Height} \times 3}{5}\right) - 1.5$
 REVERSE COTTAGE (4:2) Sash Ratio	Check Rail Height = $\left(\frac{\text{Height} \times 2}{3}\right) - 1.94$

Custom check rail heights are available upon request.

For most areas, **egress opening codes** dictate minimum clear opening width, height, and square feet. Check with your local code officials to determine the precise egress codes for each home.

3. Using the Check Rail Height (CRH) found in Step 2, calculate **Clear Opening** and/or **Clear Glass** dimensions:

Determining Clear Opening Dimensions (to assess egress code compliance)							
CLEAR OPENING WIDTH (inches)	= Width - 3.188						
CLEAR OPENING HEIGHT (inches)	<table style="border: none;"> <tr> <td style="border: none;"> <table style="border: none;"> <tr> <td style="border: none;">EQUAL (1:1) Sash Ratio</td> <td rowspan="2" style="font-size: 3em; vertical-align: middle;">}</td> <td rowspan="2" style="border: none;">= Check Rail Height - 2.875</td> </tr> <tr> <td style="border: none;">COTTAGE (2:3 or 2:4) Sash Ratio</td> </tr> </table> </td> <td style="border: none;">= Height - Check Rail Height - 2.75</td> </tr> </table>	<table style="border: none;"> <tr> <td style="border: none;">EQUAL (1:1) Sash Ratio</td> <td rowspan="2" style="font-size: 3em; vertical-align: middle;">}</td> <td rowspan="2" style="border: none;">= Check Rail Height - 2.875</td> </tr> <tr> <td style="border: none;">COTTAGE (2:3 or 2:4) Sash Ratio</td> </tr> </table>	EQUAL (1:1) Sash Ratio	}	= Check Rail Height - 2.875	COTTAGE (2:3 or 2:4) Sash Ratio	= Height - Check Rail Height - 2.75
<table style="border: none;"> <tr> <td style="border: none;">EQUAL (1:1) Sash Ratio</td> <td rowspan="2" style="font-size: 3em; vertical-align: middle;">}</td> <td rowspan="2" style="border: none;">= Check Rail Height - 2.875</td> </tr> <tr> <td style="border: none;">COTTAGE (2:3 or 2:4) Sash Ratio</td> </tr> </table>	EQUAL (1:1) Sash Ratio	}	= Check Rail Height - 2.875			COTTAGE (2:3 or 2:4) Sash Ratio	= Height - Check Rail Height - 2.75
EQUAL (1:1) Sash Ratio	}			= Check Rail Height - 2.875			
COTTAGE (2:3 or 2:4) Sash Ratio							
CLEAR OPENING AREA (ft²)	= $\frac{\text{Clear Opening Width} \times \text{Clear Opening Height}}{144}$						

Clear Opening Widths are often called **"Egress Opening"** Dimensions.

For detailed information on limited sash travel and egress conformity in specific window applications, refer to the charts on the previous page, or call a customer service associate, or see the RbA Extranet.

Determining Clear Glass Dimensions	
CLEAR GLASS WIDTH (inches)	= Width - 6.0
CLEAR GLASS HEIGHT (Upper sash, inches)	= Check Rail Height - 3.188
CLEAR GLASS HEIGHT (Lower sash, inches)	= Height - Check Rail Height - 4.938

CLEAR OPENING AND CLEAR GLASS DIMENSIONS, cont.

DOUBLE-HUNG WINDOW

SLOPED SILL INSERT

Window profiles shown for measurement purposes.

FLAT SILL INSERT DOUBLE-HUNG WINDOW

The flat sill insert double-hung window frame option is recommended when replacing existing windows that have a sill angle less than 8 degrees, when specifying an insert window frame that needs to have a flat sill to seat correctly in the opening, or when mulling multiple double-hung insert windows in an opening. It is also the window used in angle bay frames. The 3-3/16" frame width is also consistent with other insert windows to fit in a 3-3/4" pocket.

Existing window pockets must be flat. If they are not, materials must be added so that the pocket offers full support of the window frame.

As with other flat sill insert windows, the flat sill design of the insert frame double-hung window features an exterior trim kerf on all four sides of the frame, allowing for exterior Fibrex® material trim or aluminum coil stock to return to the window frame. This also facilitates mulling to other flat sill insert windows.

For measuring information, please see the *Technical Measurement Manual*. For installation methods, please see the *Product Installation Manual*.

MIN / MAX SIZES

DOUBLE-HUNG WINDOW

FLAT SILL INSERT

Certain window sizes may have limited sash travel. Refer to the charts on the following page, or call a customer service associate, or see the RbA Extranet for detailed information on limited sash travel and egress conformity in specific window applications.

Custom check rail heights can be specified to achieve different visible sash ratios. Contact the factory to confirm availability and ordering procedure.

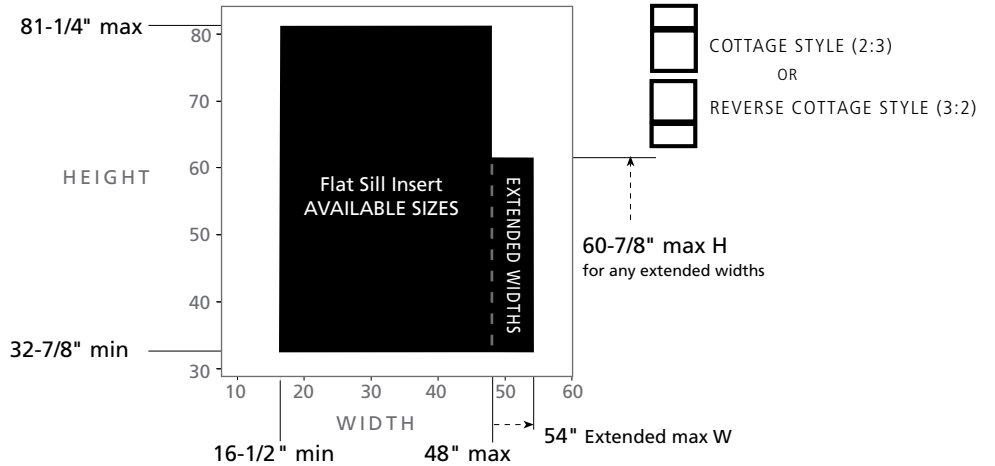

Do not confuse sash ratio and colonial grille pattern designations. Sash ratio refers to the size relationship between upper and lower sash. Grille pattern refers to the number of lites in a colonial pattern grille.

DOUBLE-HUNG WINDOW

FLAT SILL INSERT

Window profiles shown for measurement purposes.

FULL-FRAME DOUBLE-HUNG WINDOW

The full-frame double-hung window is a complete window that includes a full frame and sash. It works well in replacement situations where the old window frame is deteriorated beyond repair or when the existing window frame doesn't allow for a double-hung insert window to be installed, such as old wood casement or metal frames. Frame will also accommodate exterior and interior trim options. See page 3-10.

MIN / MAX SIZES

DOUBLE-HUNG WINDOW | FULL FRAME

Certain window sizes may have limited sash travel. Refer to the charts on the following page, or call a customer service associate, or see the RbA Extranet for detailed information on limited sash travel and egress conformity in specific window applications.

Custom check rail heights can be specified to achieve different visible sash ratios. Contact the factory to confirm availability and ordering procedure.

Do not confuse sash ratio and colonial grille pattern designations. Sash ratio refers to the size relationship between upper and lower sash. Grille pattern refers to the number of lites in a colonial pattern grille.

CLEAR OPENING AND CLEAR GLASS DIMENSIONS

DOUBLE-HUNG WINDOW

FULL FRAME

To determine the clear opening dimensions or clear glass size of either sash, follow the steps below.

1. Determine **Unit Width (W)** and **Unit Height (H)**.

2. Determine the appropriate **Check Rail Height (CRH)**:

Full Frame Double-Hung Check Rail Height (CRH)	
 EQUAL (1:1) Sash Ratio	Check Rail Height = $\left(\frac{\text{Height}}{2}\right) - 1.536$
 COTTAGE (2:3) Sash Ratio	Check Rail Height = $\left(\frac{\text{Height} \times 2}{5}\right) - 0.776$
 COTTAGE (2:4) Sash Ratio	Check Rail Height = $\left(\frac{\text{Height}}{3}\right) - .276$
 REVERSE COTTAGE (3:2) Sash Ratio	Check Rail Height = $\left(\frac{\text{Height} \times 3}{5}\right) - 2.295$
 REVERSE COTTAGE (4:2) Sash Ratio	Check Rail Height = $\left(\frac{\text{Height} \times 2}{3}\right) - 2.815$

Custom check rail heights are available upon request.

For most areas, **egress opening codes** dictate minimum clear opening width, height, and square feet. Check with your local code officials to determine the precise egress codes for each home.

3. Using the Check Rail Height (CRH) found in Step 2, calculate **Clear Opening** and/or **Clear Glass** dimensions:

Determining Clear Opening Dimensions (to assess egress code compliance)						
CLEAR OPENING WIDTH (inches)	= Width - 3.188					
CLEAR OPENING HEIGHT (inches)	<table border="0"> <tr> <td>EQUAL (1:1) Sash Ratio</td> <td rowspan="2">} = Check Rail Height - 2.875</td> </tr> <tr> <td>COTTAGE (2:3 or 2:4) Sash Ratio</td> </tr> <tr> <td>REVERSE COTTAGE (3:2 or 4:2) Sash Ratio</td> <td>= Height - Check Rail Height - 4.125</td> </tr> </table>	EQUAL (1:1) Sash Ratio	} = Check Rail Height - 2.875	COTTAGE (2:3 or 2:4) Sash Ratio	REVERSE COTTAGE (3:2 or 4:2) Sash Ratio	= Height - Check Rail Height - 4.125
EQUAL (1:1) Sash Ratio	} = Check Rail Height - 2.875					
COTTAGE (2:3 or 2:4) Sash Ratio						
REVERSE COTTAGE (3:2 or 4:2) Sash Ratio	= Height - Check Rail Height - 4.125					
CLEAR OPENING AREA (ft²)	= $\frac{\text{Clear Opening Width} \times \text{Clear Opening Height}}{144}$					

Clear Opening Widths are often called **"Egress Opening"** Dimensions.

For detailed information on limited sash travel and egress conformity in specific window applications, refer to the charts on the previous page, or call a customer service associate, or see the RbA Extranet.

Determining Clear Glass Dimensions	
CLEAR GLASS WIDTH (inches)	= Width - 6.0
CLEAR GLASS HEIGHT (Upper sash, inches)	= Check Rail Height - 3.188
CLEAR GLASS HEIGHT (Lower sash, inches)	= Height - Check Rail Height - 6.266

CLEAR OPENING AND CLEAR GLASS DIMENSIONS, cont.

DOUBLE-HUNG WINDOW

FULL FRAME

Brickmould and window profiles shown for measurement purposes.

DOUBLE-HUNG WINDOW AND RELATED PATENTS

DOUBLE-HUNG WINDOW

- Double-Hung Window - U.S. Patent Number: Des. 394,115
The ornamental design for a double-hung window.

DOUBLE-HUNG WINDOW AND RELATED PATENTS, cont.

DOUBLE-HUNG WINDOW

- Extension Jamb – U.S. Patent Number: Des. 5,555,684

An extension jamb extends the depth of a frame to accept a replacement window. Our patented design improves the standard method of securing the jambs to the window frame with glue or nails, which is the method used by many manufacturers.

The design creates a snap-in fit of the extension jamb into the window frame. This is aesthetically more pleasing and eliminates problems with staining and finishing that may occur with glue or nail holes.

Installing an extension jamb

Double-hung sill profile

- Joint Structure (Mortise/Tenon) – U.S. Patent Number: Des. 5,603,585

Renewal by Andersen® has a patented design and manufacturing method to make a welded corner with the appearance of a traditional, hand-crafted mortise-and-tenon joint. By end-cutting the sash members in a unique way, we provide a welded corner on the exterior surface of the sash that provides strength and excellent weathertight construction, while the interior portion of the sash parts are joined to create a mortise-and-tenon-style corner joint. This marriage of function and traditional window style is unique in the window replacement industry.

I acknowledge that by signing this as the homeowner, or on behalf of the homeowner as their authorized agent, I hereby confirm that all product details, features and options have been reviewed with the Order Verification Specialist (OVS). The features and options include, but are not limited to:

- Window/Door Color
- Hardware Color and Style
- Grill Configurations
- Interior Trim Style, Color and applicable Details
- Exterior Trim Style, Color, and other applicable Details
- What is and is what is not to be Painted/Stained

Removal and Replacement of the Blinds being solely my responsibility unless otherwise noted. Moreover, I have been told about potential glass loss with my new windows and I understand that some glass loss will occur. I further acknowledge that I have reviewed the order summary, I understand all that has been explained to be, especially that **SOME GLASS LOSS MAY OCCUR**, and that the order summary is accurate.
