Department of Community & Economic Development
227 West Jefferson Blvd, 12th Floor
South Bend, Indiana 46601

RE: Letter Report Documenting the Remediation of Semi Volatile Organic Compound- (SVOC-), Volatile Organic Compound (VOC-), and Total Petroleum Hydrocarbons – Gasoline Range Organics- (TPH-GRO-), and Lead-Impacted Soils at the Former Allied Stamping Plant (Tax I.D. # 18-8021-084901) in South Bend, Indiana (Site); SBI062.400.0007.DOC.

Dear Ms. Kolata:

Hull & Associates, Inc. (Hull) is pleased to submit this report documenting the additional excavation of lead, SVOC, VOC, and TPH-GRO-impacted soils and soil sampling Activities at the above referenced Site. The Corrective Action Plan Implementation (CAPI) activities were conducted pursuant the City's 2009 American Recovery and Reinvestment Act- (ARRA-) funded Brownfields Cleanup Revolving Loan Fund (RLF) that was awarded to the City by the United States Environmental Protection Agency (U.S. EPA).

SITE BACKGROUND AND PHYSICAL SETTING

From the time the Site was first developed until the late 1990s it served as an automobile part and stamping plant. At its peak of production, the Site housed 1.5 million square feet of structures dedicated to stamping automotive parts. Studebaker ceased operation at the Plant in December of 1963. The Site was then sold to and operated by Allied Products; automobile panel stamping operations continued at the Site until July 1999. The City of South Bend subsequently acquired the Site and demolished all structures at the Site. The Site is currently vacant. The Site is comprised of 31.67 acres and is surrounded by the former Studebaker Foundry to the west, a new City Transportation Building and Franklin Street to the south and east, a former Norfolk Southern Railroad yard to the south, the Former South Bend Lathe Site to the north, and a former Studebaker office building to the north-east. The location of the Site is shown on Figure 1.

SCOPE OF WORK

The remedial approach was developed based on the findings of a Phase I Environmental Site Assessment (ESA) and multiple Phase II ESAs conducted by Hull

and others. The field work was performed consistent with the Indiana Department of Environmental Management's (IDEM's) Risk Integrated System of Closure (RISC) Guidance, with IDEM's Voluntary Remediation Program (VRP), and with a Work Plan[1] prepared for the City and approved by U.S. EPA and IDEM. The scope of work for the project included the following:

1. the excavation and subsequent off-site disposal at an approved facility of lead-, SVOC-, VOC-, and TPH-GRO-impacted soils from four surveyed areas.

Corrective Action Implementation: Excavation and Sampling Program

In accordance with the Work Plan, the remedial efforts planned for the Site were based on the assumption that the following exposure pathways exist for the previously-identified hazardous substances present in soil at the Site:

- Direct contact to surface soils by visitors and trespassers to the Site through skin contact, dust inhalation, and soil consumption; and
- Exposure of construction workers to surface and/or subsurface soils during trenching and/or excavation activities.

Four separate areas were targeted for remediation with the ARRA funds approved for expenditure at the Site, as follows: excavation A (lead-impacted soils) and excavation B (SVOC-impacted soils) were located in the northeastern portion of the Site; excavation C (SVOC-impacted soils) was located in the southeastern portion of the Site; and excavation D (VOC- and TPH-impacted soils) was located in the southwestern portion of the Site. The locations of excavations A through D in relation to current and former Site features are shown on Figure 2.

The cleanup levels selected for this project are the VRP Non-Rule Policy Cleanup Guidance Level for lead in excavation A and the VRP Non-Residential Surface Soil Limits for SVOCs in excavations B and C. The VRP Non-Residential Surface Soil Limits for VOCs; and, in the absence of a cleanup level for TPH in IDEM's VRP, the RISC Commercial/Industrial Default Closure Level (IDCL) for TPH; were established as the cleanup level for excavation D.

An Analysis of Brownfield Cleanup Alternatives[2] (ABCA) prepared by Hull in May 2010 estimated that up to 1,700 cubic yards (cy) (approximately equivalent to 2,550 tons) of soil would be removed from the Site. However, given the relatively large distance between historical soil sampling locations, and to streamline the bidding process (primarily so as to not commit the City to excavating a larger quantity than necessary), the Work Plan initially proposed 119 cy in excavation A, 119 cy in excavation B, 415 cy in excavation C, and 415 cy in excavation D (a total of 1,068 cy). The locations of the proposed excavations are shown on Figure 2. Prior to the commencement of remedial activities at the Site, the coordinates of the excavations were surveyed and staked by Wightman Petrie, Inc., an Indiana-licensed Professional Surveyor.

---

[2] *Analysis of Brownfield Cleanup Alternatives for Vacant Land Tax I.D. No. 18-8021-084901 (The Former Studebaker Stamping Plant);* Hull & Associates, Inc.; May 2010.

Through a bidding process coordinated through the City's Board of Public Works, the City retained the services of John Boettcher Sewer & Excavating Contractor, Ltd. (Boettcher) to serve as the remediation contractor for the project. Boettcher selected Waste Management, Inc. (WMI) as the disposal facility owner/operator and was informed by WMI, based on initial laboratory data provided by Hull to Boettcher, that WMI would likely direct soils for disposal at either Earthmovers Landfill in Elkhart, IN or Prairie View Landfill in Wyatt, IN. However, prior to disposal approval, WMI requested additional laboratory analyses in order to properly manifest the soils. Accordingly, Hull and Boettcher collected additional soil samples from within excavations A, C, and D and submitted the samples for analysis of leachable lead concentrations in accordance with U.S. EPA Toxicity Characteristic Leaching Protocol (TCLP). Soil samples were submitted to Pace Analytical Services, Inc. (Pace) in Indianapolis, IN. The results of the TCLP analyses are summarized in Table 1, and a copy of the analytical report from Pace is included in Appendix A. Upon receipt of analytical data from Pace, WMI approved the soils from excavations C and D (as well as soils from excavation B, which did not require additional laboratory analyses) as non-hazardous material disposable as alternate daily cover at either of the aforementioned disposal facilities. Upon receipt of additional analytical data from Pace, WMI approved the soils from excavation A as special waste for direct landfill disposal at Prairie View Landfill.

From October 11, 2010 through December 8, 2010, under the supervision of Hull, Boettcher excavated lead-, SVOC-, VOC-, and TPH-impacted soils from the four excavation areas at the Site. Ultimately, Boettcher excavated approximately 1,990 cy of soil as described below.

Confirmatory sidewall soil samples were collected approximately every 20 linear feet from halfway between the surface and the bottom of the excavation wall. Confirmatory soil bottom samples were also collected from the base of the excavation at an approximate density of every 1000 square feet (i.e. one sample per 32' x 32' area). In the relatively more shallow excavations (i.e., A, B, and C), to ensure that the exposure pathway of concern was rendered incomplete the excavation depth was completed to a depth of approximately 2.5 feet below grade.

The excavations were initially sampled along the sidewalls and on the excavation floor at the desired sample intervals, as stated in the previous paragraph. One or two aliquots were collected into an appropriately labeled 4 oz. jar from each sampling location. Samples were sent to Pace for the analysis of concentrations of the appropriate chemical(s) of concern (COC) for the respective excavations. Areas where confirmatory samples exhibited concentrations of analytes above their respective closure levels were overexcavated at the location from which the previous samples were initially collected. Overexcavations along the sidewalls were conducted at approximately 5' x 5' (length x width) intervals to the appropriate depth based on the excavation, and resampled following overexcavation. This process was continued iteratively as warranted until confirmatory samples indicated that the applicable closure levels were not exceeded. Bottom sample locations were overexcavated one to two additional feet in depth across a 5' x 5' area and resampled as described.

Matrix spike and matrix spike duplicate (MS/MSD) samples, equipment blank samples, and duplicate soil samples were collected from excavations A through D for laboratory

quality assurance and quality control (QA/QC) and to meet the requirements of the Quality Assurance Project Plan approved by U.S. EPA for this grant-funded project. Immediately following the collection of all soil samples, the sample jars were placed in a cooler with ice and submitted to Pace with appropriate chain-of-custody documentation. Tables 2 through 5 provide a summary of the confirmatory soil sampling locations and results. Figures 3 through 6 show the locations of confirmatory samples that were above and below pathway-specific closure levels, as well as the locations of areas that were overexcavated to remove impacted soils where pathway-specific closure levels were exceeded. Copies of all laboratory analytical reports are included in Appendix A.

According to landfill weigh tickets provided by Boettcher, approximately 1,989.98 tons of impacted soils were excavated from the Site and properly disposed. Copies of the landfill weigh tickets are included in Attachment B. That quantity was corroborated by Hull's field representative conducting observation and sampling activities at the Site. Backfill for excavations A through D consisted of clean sand fill trucked in from an off Site source. The fill was compacted and leveled as it was placed in the excavation to a depth of approximately six inches below grade. Backfilling activities (except for the final layer of topsoil) continued throughout the project as excavations were completed. Finally, the uppermost six inches of each excavation was backfilled with topsoil, seeded, and covered with straw. Final topsoil placement, seeding, and final cover activities were completed on December 28, 2010.

SUMMARY AND DISCUSSION

One hundred two confirmatory soil samples were collected during the October through December 2010 excavation activities; the samples were analyzed by Pace for the appropriate COC/COCs, depending upon the source excavation, as requested by Hull. Soil analytical results of the confirmatory samples collected for lead analyses from excavation A are summarized in Table 2. Soil analytical results of the confirmatory samples collected for SVOCs analyses are summarized in Tables 3 (excavation B) and 4 (excavation C). Soil analytical results of the confirmatory samples collected for VOCs and TPH from excavation D are summarized in Table 5. The results presented in Tables 2 through 5 are also compared to their respective cleanup levels as discussed above.

The concentrations of lead detected in the first (i.e., following removal of soils from the staked excavation area) confirmatory soil samples collected from excavation A did not exceed the closure level for excavation A. Therefore, no overexcavation from excavation A was necessary. The locations of all soil samples collected from excavation A are shown on Figure 3.

SVOCs (specifically, benzo(a)pyrene) concentrations in excavation B exceeded the VRP non-residential surface soil limit in soils samples SW-1B, SW-2B, SW-4B through SW-9B, SW-13B, SW-17B, SW-21B through SW-23B, SW-25B, SW-28B, SW-30B, SW-31B, SW-34B, SW-35B, SW-38B, SW-40B, SW-41B, and SW-43B. Accordingly, these areas were overexcavated to remove impacted soil. Laboratory analyses of the final confirmatory samples collected in overexcavated areas indicated that soils exhibiting SVOCs concentrations exceeding the appropriate VRP standard had been removed. The locations of all soil samples collected from excavation B are shown on Figure 4. It should be noted that two sidewall samples in the vicinity of SW-41B were inadvertently

not collected; however, this fact was not discovered until Boettcher had completed backfilling activities and demobilized equipment from the Site.

The concentrations of SVOCs detected in the first confirmatory soil samples collected from excavation C did not exceed the closure level for excavation C. Therefore, no overexcavation from excavation C was necessary. The locations of all soil samples collected from excavation C are shown on Figure 5.

No confirmatory soil samples collected from excavation D exceeded the RISC IDCL for TPH parameters. However, VOCs (specifically, tetrachloroethene) concentrations in excavation D were detected above the VRP Non-Residential Subsurface Soil cleanup value in excavation bottom soil sample BS-1D (collected at a depth of 7 feet below ground surface (bgs)). Accordingly, this area was overexcavated to a depth of 10 feet for the removal and disposal of additional soil. Confirmatory bottom samples BS-3D, BS-4D, BS-5D, and BS-6D were collected from the base of the overexcavated areas ; laboratory analyses of these bottom soil samples confirmed that soils exhibiting concentrations of VOC exceeding VRP standards in this portion of the Site were removed. The locations of all soil samples collected from excavation D are shown on Figure 6.

As stated above, approximately 1,990 tons of impacted soils were excavated from the Site. The amount of soil excavated exceeded the amount of soil proposed to be removed (approximately 1,602 tons) in the bid package tendered by the City by approximately 388 tons. However, the amount of soil excavated is well below the amount of soil potentially considered for removal (as stated above, approximately 2,550 tons) in the ABCA. Based on the removal and proper disposal of soils exceeding applicable closure levels at the Site, no additional remedial activities pertaining to soil impacts appear to be warranted at the Site. However, as noted above regarding confirmatory samples in excavation B, depending upon the ultimate configuration of any redevelopment in this area of the Site, additional confirmatory samples may be necessary in the immediate vicinity of SW-41B.

We trust this information meets your needs at this time. Should you have any questions about this investigation, please do not hesitate to contact us at (800) 241-7173.

Respectfully,

for

Indianapolis, IN 46250

RE: Project: SBI062
Pace Project No.: 5041243

Dear Mr. Stuart:
Enclosed are the analytical results for sample(s) received by the laboratory on September 11, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

QUALIFIERS

Project: SBI062
Pace Project No.: 5041243

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

RE: Project: SBI062
Pace Project No.: 5042073

Dear Mr. Stuart:
Enclosed are the analytical results for sample(s) received by the laboratory on October 04, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer for
Kenneth Hunt

QUALIFIERS

Project: SBI062
Pace Project No.: 5042073

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

RE: Project: SBI062
Pace Project No.: 5042301

Dear Mr. Stuart:
Enclosed are the analytical results for sample(s) received by the laboratory on October 12, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

QUALIFIERS

Project: SBI062
Pace Project No.: 5042301

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

RE: Project: SBI062
Pace Project No.: 5042305

Dear Mr. Stuart:
Enclosed are the analytical results for sample(s) received by the laboratory on October 12, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer for
Kenneth Hunt

QUALIFIERS

Project: SBI062
Pace Project No.: 5042305

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

ANALYTE QUALIFIERS

1d	Due to physical characteristics of the extract, it was run at 10x. KES 10-18-10
2d	MS compound recovery not evaluated against control limits due to dilution. KES 10-18-10
3d	MSD compound recovery not evaluated against control limits due to dilution. KES 10-18-10
E	Analyte concentration exceeded the calibration range. The reported result is estimated.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

RE: Project: SBI062
Pace Project No.: 5042513

Dear Mr. Stuart:
Enclosed are the analytical results for sample(s) received by the laboratory on October 16, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

QUALIFIERS

Project: SBI062
Pace Project No.: 5042513

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

ANALYTE QUALIFIERS

1d	Due to physical characteristics of the extract, it was run at 10x. KES 10-22-10
S0	Surrogate recovery outside laboratory control limits.

Hull & associates, inc.

RE: Project: SBI062
Pace Project No.: 5042549

Dear Mr. Stuart:
Enclosed are the analytical results for sample(s) received by the laboratory on October 19, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

QUALIFIERS

Project: SBI062
Pace Project No.: 5042549

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

ANALYTE QUALIFIERS

1d	The surrogate recovery exceeds the upper limit due to significant contribution from the target analyte. 10/21/10 EDD
P6	Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
R1	RPD value was outside control limits.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

RE: Project: SBI062
Pace Project No.: 5042614

Dear Mr. Stuart:
Enclosed are the analytical results for sample(s) received by the laboratory on October 21, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

QUALIFIERS

Project: SBI062
Pace Project No.: 5042614

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

ANALYTE QUALIFIERS

D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
R1	RPD value was outside control limits.
R2	RPD value was outside control limits due to matrix interference
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

RE: Project: SBI062
Pace Project No.: 5042780

Dear Mr. Stuart:
Enclosed are the analytical results for sample(s) received by the laboratory on October 26, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

QUALIFIERS

Project: SBI062
Pace Project No.: 5042780

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

ANALYTE QUALIFIERS

L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

Hull & associates, inc.

RE: Project: SBI062
Pace Project No.: 5042902

Dear Mr. Stuart:
Enclosed are the analytical results for sample(s) received by the laboratory on October 28, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

QUALIFIERS

Project: SBI062
Pace Project No.: 5042902

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-PA	Pace Analytical Services - Greensburg

ANALYTE QUALIFIERS

M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
R1	RPD value was outside control limits.
S1	Surrogate recovery outside laboratory control limits (confirmed by re-analysis).

Hull & associates, inc.

Samplers: Luke Wright

SAMPLE TYPES: A - AIR; C - ASBESTOS; D - SEDIMENT; G - GROUNDWATER; P - PRODUCT; S - SOIL; W - WATER; Z - OTHERS

PRESERVATIVES: A - Cool only, <4 deg. C; B - HNO_3 pH<2; C - H_2SO_4 pH<2; D - NaOH pH>12; E - ZnAcetate + NaOH, pH>9; F - $Na_2S_2O_3$ (0.008%); G - HCL pH <2

METALS: F - FILTERED; N - NOT FILTERED; B - BOTH

All samples are kept at 4 degrees Celsius.

ANALYSES / PRESERVATIVES: VOCs

RE: Project: 5043176
Pace Project No.: 3036853

Dear KEN HUNT:
Enclosed are the analytical results for sample(s) received by the laboratory on November 06, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Penny Westrick

QUALIFIERS

Project: 5043176
Pace Project No.: 3036853

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-PA	Pace Analytical Services - Greensburg

ANALYTE QUALIFIERS

1c	MS/MSD analysis confirms sample matrix effects.
2c	RPD outside QC limits due to non-homogenous sample.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
R1	RPD value was outside control limits.
S0	Surrogate recovery outside laboratory control limits.
S1	Surrogate recovery outside laboratory control limits (confirmed by re-analysis).

RE: Project: SBI062
Pace Project No.: 5043423

Dear Mr. Stuart:
Enclosed are the analytical results for sample(s) received by the laboratory on November 12, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

QUALIFIERS

Project: SBI062
Pace Project No.: 5043423

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

ANALYTE QUALIFIERS

1d	Due to physical characteristics of the extract, it was run at 10x. KES 11-17-10
2d	Due to physical characteristics of the extract, it was run at 5x. KES 11-17-10
3d	MS compound recovery not evaluated against control limits due to sample dilution. KES 11-17-10
4d	MSD compound recovery not evaluated against control limits due to sample dilution. KES 11-17-10
5d	Surrogate recovery outside control limits. Data accepted based on valid recovery of surrogates in the LCS and samples. KES 11-16-10
E	Analyte concentration exceeded the calibration range. The reported result is estimated.
R2	RPD value was outside control limits due to matrix interference
S0	Surrogate recovery outside laboratory control limits.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

Hull & associates, inc.

Indianapolis, IN 46250

RE: Project: SBI062
Pace Project No.: 5043986

Dear Mr. Stuart:
Enclosed are the analytical results for sample(s) received by the laboratory on December 02, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andrew Votaw for
Kenneth Hunt

QUALIFIERS

Project: SBI062
Pace Project No.: 5043986

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

ANALYTE QUALIFIERS

S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

RE: Project: SBI062
Pace Project No.: 5044186

Dear Mr. Stuart:
Enclosed are the analytical results for sample(s) received by the laboratory on December 08, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kenneth Hunt

QUALITY CONTROL DATA

Project: SBI062
Pace Project No.: 5044186

QC Batch: PMST/5400
QC Batch Method: ASTM D2974-87
Analysis Method: ASTM D2974-87
Analysis Description: Dry Weight/Percent Moisture
Associated Lab Samples: 5044186001

SAMPLE DUPLICATE: 517902

Parameter	Units	5044186001 Result	Dup Result	RPD	Max RPD	Qualifiers
Percent Moisture	%	9.3	9.9	7	5	R2

SAMPLE DUPLICATE: 517903

Parameter	Units	5044082010 Result	Dup Result	RPD	Max RPD	Qualifiers
Percent Moisture	%	10.6	11.0	4	5

QUALIFIERS

Project: SBI062
Pace Project No.: 5044186

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

ANALYTE QUALIFIERS

1d	Due to the viscosity of the extract, it was run at 10x. KES 12-10-10
L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
R1	RPD value was outside control limits.
R2	RPD value was outside control limits due to matrix interference
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

Hull & associates, inc.

REPORT TO: Doug Stuart

Client: City of South Bend, IN

Site: Allied Stanley Plant

Project #: 531062 Phase: ____

Samplers: Luke Wright

SAMPLE TYPES	PRESERVATIVES	METALS
A - AIR	A - Cool only, <4 deg. C	F - FILTERED
C - ASBESTOS	B - HNO_3 pH<2	N - NOT FILTERED
D- SEDIMENT	C - H_2SO_4 pH<2	B - BOTH
G- GROUNDWATER	D - NaOH pH>12	
P- PRODUCT	E - ZnAcetate + NaOH, pH>9	
S- SOIL	F - $Na_2S_2O_3$ (0.008%)	
W- WATER	G - HCL pH <2	
Z- OTHERS		

All samples are kept at 4 degrees Celsius.
