**RE: Report Phase II Environmental Site Assessment  
Enyart Electric Motor Repair Facility  
120/122 E. Sample Street  
South Bend, Indiana  
Project No. PES 10-057**

Phifer Environmental Services, LLC (PES) is pleased to provide this Report of Phase II Environmental Assessment for the Enyart Electric Motor Repair Facility, located at 120/122 East Sample Street, in South Bend, Indiana. Our services were conducted in accordance with the Proposal for Phase II Environmental Consulting Services, dated July 14, 2010, as approved by the City of South Bend, Re-Development Commission on November 19, 2010.

#### **BACKGROUND INFORMATION**

Phifer Environmental Services, LLC. has previously completed a Phase I Environmental Site Assessment of the subject site, located along East Sample Street, which is being considered, with other properties, for acquisition as part of the proposed expansion of the IVY Tech Community College Campus. The main building, situated on approximately 0.1641-acres of land, is developed as the Enyart Electric Motor Repair facility. Together, with former residential addresses identified as 117, 119, 121 and 123 E. Ohio Street (demolished and transitioned to parking areas for the commercial operations of Enyart Electric Motor Repair), the subject site constitutes approximately 0.4875-acres of land.

The original structure consists of the 1927 construction of a two story brick and concrete block building used as the electric motor repair shop (main level), warehouse (former upstairs tenant space), and small limited-use basement (motor parts storage). A concrete block addition to the rear of the building (circa 1977) was constructed to bring the facility to its current size of approximately 9,638 sq. ft.. The facility is owned by the Patricia Enyart Revocable Trust, with the current tenant owning the business (Enyart

**2502 Lincoln Way West P.O. 430 Mishawaka, IN 46546 (574)968-7191 (574) 255-4699**

Electric Motor Repair), and leasing the building. We note that the ground level of the building has operated as either Enyart Electric Motor Repair (currently), or as Enyart Electric Motor Service (1965 through 2009, under two prior owners); and that the upstairs portion of the building, reportedly has not been occupied by a "tenant" since the late 1980s.

There are two overhead roll-up doors that serve as a point of entry to the shop area, as well as a side-entry roll-up door along the common alleyway between the subject site and the adjacent Mason Heating, A/C and Appliances facility (116/118 E. Sample Street). Truck/auto access to the facility is via the aforementioned common alleyway, to a gravel covered lot at the rear of the building. Access to the gravel covered lot is also available from E. Ohio Street, to the south.

Adjacent property uses include the expansive Juvenile Justice Center to the south, Miami Auto Glass to the southwest, Mason Heating and Cooling Service (with an upholstery repair/tailoring operations as a tenant) and Michiana Transmission (former gas station) to the west, the former Sibley Foundry & Machine facility to the northwest/north/northeast of the subject site, the Ziker Cleaners processing facility further to the northeast, and Sinco Pool (sales and service) to the east.

As presented in our Report of Phase I Environmental Site Assessment, dated July 6, 2010, Phifer Environmental Services, LLC (PES) identified the following Recognized Environmental Conditions associated with the subject site:

- 1) The subject site (122 E. Sample Street) was identified as the location of a former 6,000 gallon heating oil tank by the regulatory database search. The UST, which was removed from the ground in January 1990, was reportedly assessed for potential releases at the time of the tank removal. However, no records of the assessment, other than "Notifications" to IDEM (Appendix D) were available through the current tenant, or search of the IDEM Virtual File Cabinet. In the absence of information regarding the assessment of the UST at the time of removal; the former UST system is considered a Historical Recognized Environmental Condition. We note that the use of the UST was as an on-site consumptive fuel (heating oil), and that the system would be considered "exempt" by current regulations. Additional site assessment would be necessary to determine the extent to which, if any, environmental impact to the subsurface environment remains as a result of the former UST system.
- 2) The facility (122 E. Sample Street) was identified as a RCRA CESQG by the regulatory database search, with waste streams identified as Not Defined (D000), Ignitable Hazardous Wastes (D001) and Spent Non-halogenated solvents (F003). Such wastes are generally the result of mixed wastes generated by two parts washing basins containing mineral spirits. Such mineral spirits, as well as waste oils generated on site, and received from off-site, are burned within an on-site waste oil furnace. Overall, an estimated 200-gallons of mineral spirits and 275-gallons of waste oil are burned annually by the waste oil furnace, with introduction by an aspirating (air compressor) system. The waste oil/solvent mix is stored within aboveground storage tanks that are adjoining the furnace unit. As a result of transfer operations and blow-down from the air compressor unit (aspirator), significant staining of the concrete flooring was identified in the area of the waste oil furnace. Some level of subsurface contamination may have resulted from incidental releases

associated with the waste oil furnace operations (Recognized Environmental Condition).

- 3) Numerous floor drains were identified throughout the workshop area of the building. Although attempts were made to "close" several of the drains; there remains some doubt as to how effective such closure was in sealing off potential entry of waste oils and other potential contaminants. Other drains remained operational and were located in areas whereby the introduction of waste oils and potentially solvents (i.e., mineral spirits) was possible. The discharge point for drains is thought to be the municipal sanitary sewer (unconfirmed); however the likelihood exists that at least one of the drains (principally installed to facilitate the removal of snow melt from the garage area) may discharge to the on-site dry well located within the rear parking area. Staining of the concrete in areas surrounding the floor drains was visually apparent. Based on the aforementioned factors, the floor drains and the potential introduction of waste oils and possibly solvents to the subsurface environment throughout 45 years of motor repair service, is considered a Recognized Environmental Condition.

We note that the immediate area of the subject site has also been the location of significant industrial activity dating to the early 1900s, and that potential sources of contamination in the immediate area of the subject site may not be fully delineated. As such, the potential exists that "undiscovered or unreported" releases may be identified in the future (i.e. off-site sources). We also note that the chemical and physical characteristics of the primary Contaminant of Concern (tetrachloroethylene) for both the Sibley Foundry and Ziker Cleaners Corrective Action Plan activities (north of site), to that of waste oils and mineral spirits identified as being associated with historical Enyart Electric Motor Repair operations, are distinctly different. Thus, the potential for on-site environmental impact as a result of material handling activities conducted at the Enyart Electric Motor Repair/Service facility cannot be discounted based solely on the groundwater data from two nearby, off-site, well locations installed during assessment of tetrachloroethylene associated with the Sibley Foundry and Ziker Cleaners.

Based on the aforementioned Recognized Environmental Conditions, PES recommended a Phase II Environmental Site Assessment involving the collection of soil and groundwater samples at the periphery of the existing building, and the former UST tank pit, be collected for the purpose of identifying the presence or absence of significant contamination. Such samples would also provide information regarding the need, if any, for remedial action, and associated cost implications relative to the proposed real estate transaction in the event significant contamination was identified.

## **SCOPE OF SERVICES**

As presented in our Proposal for Phase II Environmental Site Assessment, PES recommended a total of four soil borings and temporary groundwater wells for the purpose of collecting and analyzing samples for the possible presence of contamination associated with the former heating oil UST system, the historical storage/use of waste oils and minerals spirits, floor drains and adjacent property uses. A total of three boring/temporary well locations were proposed for the periphery of the site to identify the extent to which, if any, significant contamination is present at the subject site, as well as assessment of the potential for on-site migration of contaminants from off-site sources. With respect to the former heating oil UST, a soil boring/temporary well was established within the confines of the former tank pit.

The following discussion further describes the methods used during the implementation of such Phase II Environmental Site Assessment.

### ***Soil Sampling via Geoprobe Methodology***

PES subcontracted D & T Drilling Services to install a series of four Geoprobe (small, track-mounted, hydraulically driven sampling probe) soil borings at the subject site. (Refer to Appendix A, Figure 3 for locations of the identified soil borings.) Prior to mobilization, the specific locations were cleared for utilities through contact with the Indiana Underground Utility Locate Service, as required by law (minimum 48-hours advance contact).

For each of the three periphery Geoprobe borings, discrete soil samples were collected at 5-foot intervals throughout the soil profile until such depth as saturated soils, consistent with the existing water table, were encountered. For the boring at the former UST tank pit (GP-4), discrete soil samples were collected at 5-foot intervals to a depth of at least 20-feet below land surface. Knowing that the 6,000-gallon former UST system would likely have been installed to a depth of 8- to 10- feet; if contamination were associated with the UST tank pit, it would likely be identified within the selected 20-foot depth interval. Once the 20-foot depth interval was attained, the Geoprobe was advanced to the point of saturation, as identified from completion of the three prior soil borings (roughly 29 feet below land surface).

Each 5-foot soil sample interval was initially screened for volatile organics by passing a photoionization detector (PID) over the entire sample sleeve. Once a 2-foot interval of the sample sleeve was established for the collection of a “grab sample”, portions of the “grab sample” were placed into a plastic bag and sealed. Allowing time for equilibration, the PID sampling probe was inserted into the bag to observe a reading of “total VOCs” in parts per million (ppm). All data associated with the “field screening” of VOCs was recorded for future reference on the individual Soil Boring Logs (Appendix B).

In accordance with IDEM guidance, PES used Terra-Core Methods for collection of “grab samples” to be analyzed for Volatile Organic Compounds (VOCs). Additional soils from the selected sample intervals were collected within a laboratory-provided 4-ounce glass jar for analysis of High End Organics (C8 through C34), and carcinogenic Polynuclear Aromatic Hydrocarbons (cPAHs).

The determination of which soil sample depth intervals were submitted for laboratory analysis was contingent on factors that included: 1) PID field screening results, 2) visual observations of stained soils that would indicate the presence of contamination, and 3) olfactory (smell) observations. However, as presented by the Soil Boring Logs (Appendix B), field screening of the soil sample depth intervals did not result in the deflection of the PID instrument; an initial indication of the absence of Volatile Organic Compounds.

It should be noted that PES did not observe the presence of any staining during our visual examination of the various 5-foot intervals of the periphery Geoprobe sampling sleeves, nor did we observe any odors that would indicate the presence of environmental impact. Some slight staining and petroleum odor were noted at the former tank pit (GP-4) at a depth of approximately 4.5 to 5 – feet, and from 8 to 10-feet. Such indications were not consistent with the presence of significant contamination bands, but

more consistent with scattered and randomly placed, marginally impacted backfill, likely excavated from the tank pit at the time of removal (i.e., incidental spillage). Such materials were more than likely re-used as backfill for the void created by the removal of the UST. It should be noted that field screening of these soils by PES did not identify the presence of any significant contamination.

All soil samples selected for laboratory analysis were labeled with a specific location and depth designation, packed on ice, and forwarded to the laboratory under chain-of-custody procedures via overnight courier. For this project, Pace Analytical Laboratories of Indianapolis, Indiana was subcontracted to perform the analysis of selected samples.

### ***Temporary Geoprobe Well Installation/Non-Potable Well Sampling***

As previously indicated, PES encountered the presence of a saturated zone, consistent with that of an underling water table, at a depth of approximately 29-feet below land surface in all of the Geoprobe soil borings. A sample of the groundwater at each boring location was collected through insertion of the Geoprobe groundwater sampling probe. The groundwater sampling probe allows for the extension of a stainless steel screen for collection of a groundwater sample from the point at which the probe encounters a saturated or water-bearing zone (stainless steel screen is extended approximately 4-feet into the saturated zone). Once inserted within the water-bearing zone, the "temporary well" was purged utilizing a peristaltic pump, or other method, until such time as the water discharge became relatively free of solids (approximately 1.5-gallons) prior to actual sample collection. All groundwater samples were collected within pre-cleaned, laboratory provided glassware (three 40 ml. vials preserved with hydrochloric acid, and two 1-liter unpreserved amber bottles). Such samples were appropriately labeled, packed on ice and forwarded to the laboratory (Pace Analytical) for the analysis of Volatile Organic Compounds (VOCs) and carcinogenic Polynuclear Aromatic Hydrocarbons (cPAHs).

With completion of soil and groundwater sampling activities, and given that there were no indications of contamination identified by field screening; excess soils from the Geoprobe sample sleeves were returned to the respective borings from which they were derived. Any remaining interval of the borehole (to within 6-inches of ground surface) was backfilled with bentonite pellets to form a seal and prevent the potential for introduction of contaminants from above. Finish "plugs" of concrete were applied to ground surface elevation for borings GP-3 (Sinco Pool drive) and GP-4 (interior of garage).

## **SUMMARY OF RESULTS**

### ***Geoprobe Soil Sampling***

The subject site relative to adjacent property use is presented in Appendix A, Figure 2. Locations of Geoprobe borings are presented in Appendix A, Figure 3. Copies of the Soil Boring Logs for each of the four Geoprobe borings are presented in Appendix B.

As indicated by the Soil Boring Logs, the nature of soils present at the subject site consists predominately of fine to coarse sands, some with gravel. Upper zones (within 5-feet of ground surface) were also noted to have some silt and clay. Also noted was the presence of some stained soils at a depth consistent with the base of the former UST system at location GP-4. Such stained soils were interspersed within the 5-foot to 10-

foot depth interval, and were deemed to be consistent with the use of excavated soils from the tank removal process as a backfill material once the UST system had been removed from the ground. We note that at the time of UST removal (1990), removal contractors typically had soil samples analyzed for the presence of Total Petroleum Hydrocarbons-Diesel Range Organics, noting that IDEM had established an action level of 100 parts per million TPH as requiring "no further action". Typically, if the soil analytical data indicated TPH as less than 100 ppm, such soils were considered suitable for on-site re-use as a backfill material for the void created by the pulling of the tank system.

In the absence of any field screening results indicating the presence of contamination within the periphery borings; PES selected the depth interval in immediate proximity of the saturated zone for laboratory analysis. For the former UST boring location (GP-4), a depth interval of 8-foot to 10-foot was selected for laboratory analysis based on the presence of some limited petroleum odor and staining, and the depth to which the base of the former UST would have been installed.

Analytical results for soil samples submitted for laboratory analysis are presented in Table 1, respectively. Analysis of the selected soil samples from the three periphery borings did not reveal the presence of any of the Chemicals of Concern above the specified laboratory detection limits. For the UST boring (GP-4), only the presence of residual carcinogenic PAH's, at levels well below the RISC Residential Criteria (Table 2), were reported by laboratory analysis (i.e., no VOCs or TPH-ERO reported). Again, the presence of such residual PAHs is consistent with the use of minimally impacted soils as a backfill material for the void created with removal of the tank system.

The identified Default Closure Values (Table 2) are derived from the lowest of five factors that include: 1) concentration for soil saturation, 2) soil attenuation capacity, 3) calculations regarding risk-based construction worker scenario, 4) calculations regarding risk-based direct exposure, and 5) calculations regarding the potential exposure as a result of migration to groundwater. Default Closure Values are considered protective of human health.

### ***Temporary Geoprobe Well Installation/Non-Potable Well Sampling***

As presented in Table 3, analysis of the identified groundwater samples for the presence of Volatile Organic Compounds and carcinogenic PAHs did not identify the presence of any specific Contaminants of Concern above the reported laboratory detection limits. Such results would be consistent with the absence of significant groundwater contamination attributable to the operations of the subject site, as well as the absence of significant contamination associated with the on-site migration of contaminants from other nearby sites/facilities.

## **CONCLUSIONS**

On the basis of the results obtained from the current Phase II Assessment of the subject site, it does not appear as though there is significant environmental impact to the subject property as a result of historical electrical motor repair operations having been undertaken since the mid 1960s. Laboratory results for soil samples collected from peripheral soil borings indicated all Contaminants of Concern to be below laboratory detection limits.

ND – Not detected above laboratory Detection Limits  
 (0.11 ug/l) – Laboratory Reporting Limit

Similarly, it does not appear as though the historical presence of a 6,000-gallon heating oil UST system (removed in 1990) has resulted in significant environmental impact to the immediate area of the former UST tank pit (area that would most likely to exhibit residual contamination). For the UST boring (GP-4), only the presence of “residual” carcinogenic PAH’s, at levels below the RISC Residential Criteria (Table 2), were reported by laboratory analysis (i.e., no VOCs or TPH-ERO reported). The presence of such “residual” PAHs is consistent with the use of minimally impacted soils as a backfill material for the void created with removal of the tank system (1990). Furthermore there were no Contaminants of Concern identified above laboratory detection limits for any of the groundwater samples collected as part of this Phase II Environmental Site Assessment, inclusive of the temporary well established within the area of the former tank pit.

#### **RECOMMENDATIONS**

Given that the soil and groundwater samples collected from the peripheral Geoprobe soil boring/temporary wells did not exhibit the presence of any of the Contaminants of Concern above laboratory detection limits, and the fact that residual PAH contaminants identified from

the former tank pit location were reported at levels well below the Residential RISC Criteria for soils, with groundwater from the same location having Contaminants of Concern below laboratory detection limits; no significant environmental impacts have been identified by this Phase II Environmental Site Assessment. Accordingly, no further environmental assessment activities are deemed warranted at this time.

## **RELIANCE**

This Report of Phase II Environmental Site Assessment is submitted with the understanding that all data, findings, conclusions and recommendations, as presented, are appropriate for reliance by the City of South Bend and Ivy Tech Community College. Use of this report for purposes beyond those reasonably intended by the City of South Bend, Ivy Tech Community College and Phifer Environmental Services, LLC, is at the sole risk of the user.

## **QUALIFICATIONS**

The results and conclusions, as presented herein, are applicable to the specific dates and locations, as noted. This report does not warrant against future operations or conditions, nor does it warrant against historical operations or conditions that may have occurred at locations not specifically investigated by Phifer Environmental Services. While the conclusions and recommendations drawn from this Phase II Environmental Site Assessment are considered reliable relative to the presence of significant areas of contamination; other existing localized contamination, or variations in subsurface conditions, unknown to Phifer Environmental Services, may not have been identified or fully defined by this Environmental Assessment.

## **CLOSURE**

Phifer Environmental Services, LLC appreciates the opportunity to be of service to the City of South Bend and Ivy Tech Community College. Should you have any questions contact us at (574) 968-7191.

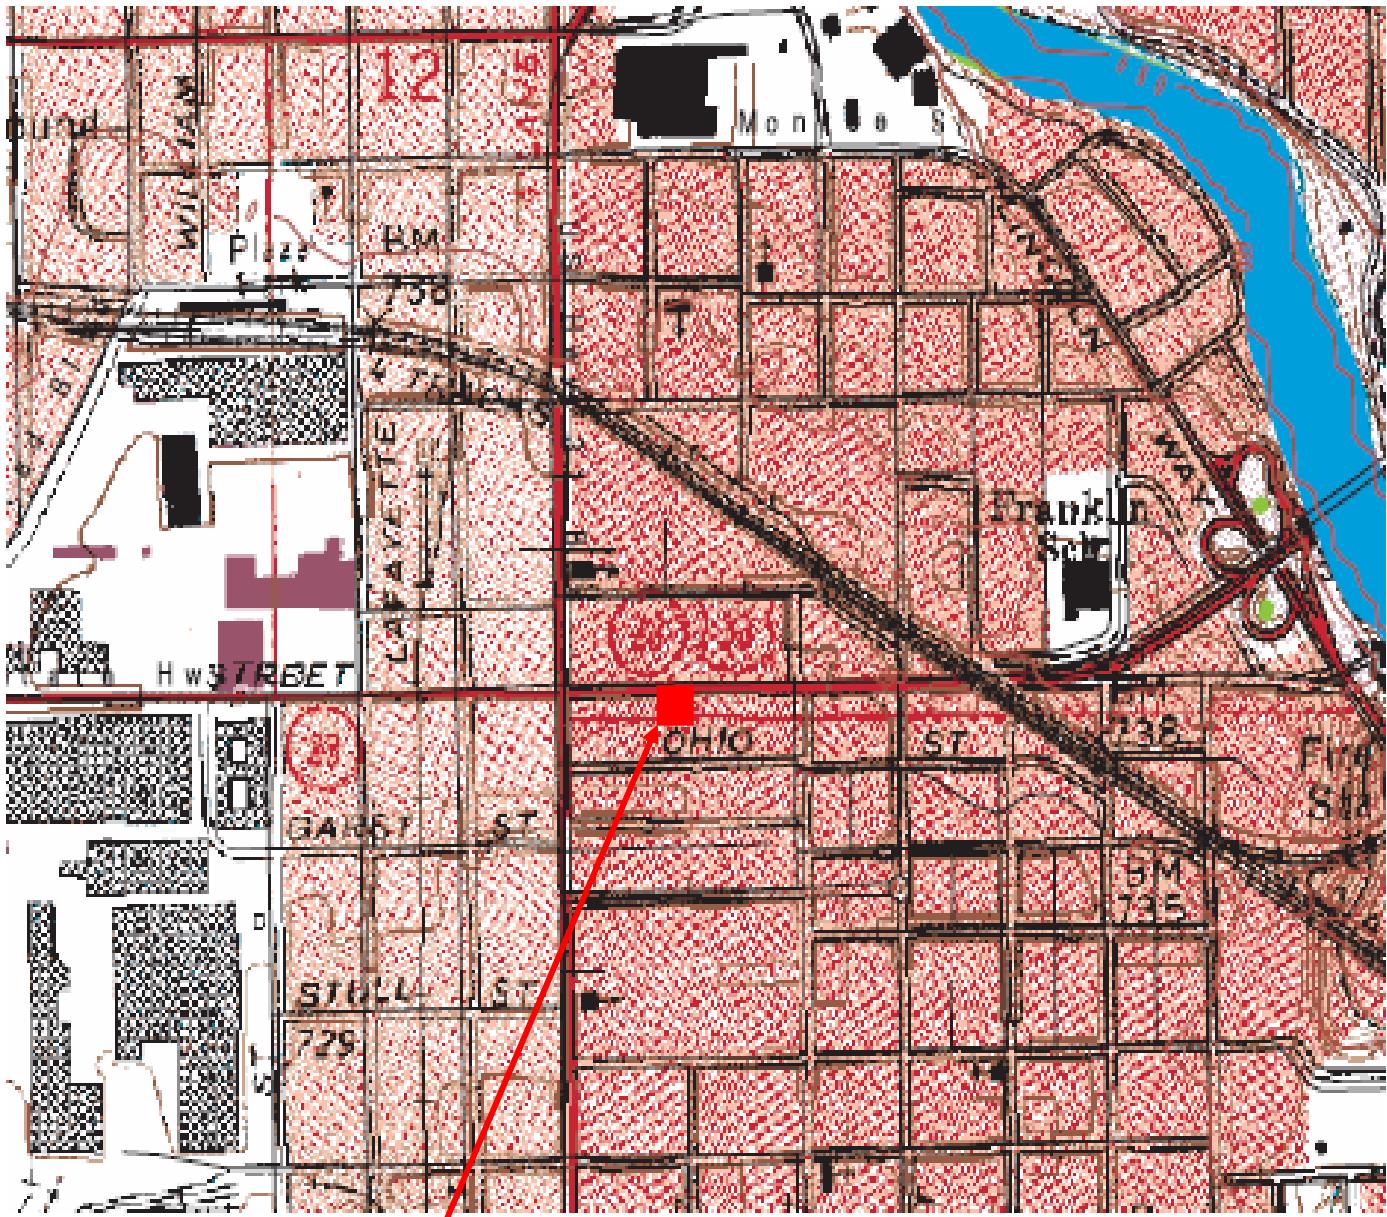

**Sincerely,**

## FIELD BORING LOG

Boring #: Enyart GP-2	Project: 122 E. Sample St.
Client: City of South Bend	
<b>Location: Exterior of building, west gravel alleyway, half-way point of building</b>	
Start Date: November 30, 2010	End Date: November 30, 2010
Ground Elevation:	Total Depth: 30 ft. bls
Drill Company: D & T Drilling	Driller: Josh Compo
Logged By: C. Phifer	Drill Method: Geoprobe

SAMPLE #	PENETROMETER	PID DETECTOR	DEPTH	USCS SYMBOL	DESCRIPTION OF MATERIAL: (Soil Description, USCS, Color, Moisture, Other Observations)
			0.0' – 0.5'		Aggregate
GP-2 (1')		0 ppm	0.5' – 1.0'	SC	Dark Brown coarse clayey sand
			1.0' – 2.5'	SC	Reddish-brown clayey silty sand (coarse) w/gravel
GP-2 (3' – 5')		0 ppm	2.5' – 7.0'	SP	Light Reddish-brown fine sand
GP-2 (8' – 10')		0 ppm	7.0 – 13.5	SW	Light brown, coarse sand w/ gravel
GP-2 (15' – 17')		0 ppm	13.5' – 17.0'	SP	Light brown fine sand
			17.0' – 23.0'	SW	Light brown coarse sand w/gravel (some large stones , approx. 1-inch diameter)
GP-2 (13' – 25')		0 ppm	23.0' – 27.0'	SP	Light brown coarse sand w/ gravel
GP-2 (27' – 29') submitted for analysis		0 ppm	27.0' – 30.0'	SP	Light brown fine sand - saturated at 29', boring terminated

2502 Lincoln Way West P.O. Box #430 Mishawaka IN 46546 574-217-6298

## FIELD BORING LOG

Boring #: Enyart GP-3	Project: 122 E. Sample St.
Client: City of South Bend	
<b>Location: Exterior, NE corner of building, south of sidewalk, Sinco concrete drive</b>	
Start Date: November 30, 2010	End Date: November 30, 2010
Ground Elevation:	Total Depth: 30 ft. bls
Drill Company: D & T Drilling	Driller: Josh Compo
Logged By: C. Phifer	Drill Method: Geoprobe

SAMPLE #	PENETROMETER	PID DETECTOR	DEPTH	USCS SYMBOL	DESCRIPTION OF MATERIAL: (Soil Description, USCS, Color, Moisture, Other Observations)
			0.0' – 0.5'		Concrete
GP-3 (1')		0 ppm	0.5' – 1.0'	SW	Dark black coarse organic sand (topsoil)
GP-3 (3' – 5')		0 ppm	1.0' – 4.5'	SC	Dark Reddish-brown clayey sand (coarse)
			4.5' – 6.0'	SP	Light brown fine sand
GP-3 (8' – 10')		0 ppm	6.0' – 12.5'	SW	Reddish brown, fine to coarse sand
			12.5' – 12.75'	CL	Reddish-brown dense clay
GP-3 (13' – 15')		0 ppm	12.75' – 14.5'	SP	Light brown coarse sand
			14.5' – 18.0'	SP	Light brown fine sand
GP-3 (18' – 20')		0 ppm	18.0' – 23.0'	SW	Light brown coarse sand w/ gravel
GP-3 (26' – 28') Submitted for analysis		0 ppm	23.0' – 27.0'	SP	Light brown coarse sand
GP-3 (26' – 28') Submitted for analysis		0 ppm	27.0' – 30.0'	SW	Light brown fine sand, saturated at 29'

2502 Lincoln Way West P.O. Box #430 Mishawaka IN 46546 574-217-6298

## FIELD BORING LOG

Boring #: Enyart GP-4	Project: 122 E. Sample St.
Client: City of South Bend	
Location: Interior of garage, concrete covering former tank pit	
Start Date: November 30, 2010	End Date: November 30, 2010
Ground Elevation:	Total Depth: 30 ft. bls
Drill Company: D & T Drilling	Driller: Josh Compo
Logged By: C. Phifer	Drill Method: Geoprobe

SAMPLE #	PENETROMETER	PID DETECTOR	DEPTH	USCS SYMBOL	DESCRIPTION OF MATERIAL: <i>(Soil Description, USCS, Color, Moisture, Other Observations)</i>
			0.0' – 0.5'		Concrete
			0.5' – 1.0'		Aggregate
GP-4 (3' – 5')		0 ppm	1.0' – 4.5'	SP	Light brown fine sand
			4.5' – 5.0'	SW	Dark reddish brown clayey sand (coarse), slight petroleum smell (tank backfill)
GP-4 (5' – 7')		0 ppm	5.0' – 7.5'	SP	Light brown fine sand
			7.5' – 8.0'	GW	Pea gravel (approx. 1/4-inch diameter)
GP-4 (8' – 10') Submitted for analysis		0 ppm	8.0' – 10.0'	SW	Dark, reddish-brown clayey sand (coarse), very slight petroleum smell (tank backfill)
			10.0' – 12.0'	SP	Light brown fine sand (friable)
GP-4 (15' – 17')		0 ppm	12.0' – 17.0'	SW	Light brown coarse sand w/ gravel
GP-4 (18' – 20')		0 ppm	17.0' – 20.0'	SP	Light brown fine sand, soil sampling terminated, groundwater sampling probe used for direct push to saturated soils at 30'

Mishawaka, IN 46546

RE: Project: ENYART / PES 10-057  
Pace Project No.: 5043907

Dear Mr. Phifer:

Enclosed are the analytical results for sample(s) received by the laboratory on December 01, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andrew Votaw

## QUALIFIERS

Project: ENYART / PES 10-057

Pace Project No.: 5043907

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

### ANALYTE QUALIFIERS

- L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- R2 RPD value was outside control limits due to matrix interference
- S0 Surrogate recovery outside laboratory control limits.

## INFORMATION

**RECEIVED**  
**JAN 25 1990**

Notification is required by Federal law for all underground tanks that have been used to store regulated substances since January 1, 1974, that are in the ground as of May 8, 1986, or that are brought into use after May 8, 1986. The information requested is required by Section 9002 of the Resource Conservation and Recovery Act, (RCRA), as amended.

The primary purpose of this notification requirement is to locate and evaluate underground tanks that store or have stored petroleum or hazardous substances. It is expected that the information you provide will be the best information available in records, or, in the absence of such records, your knowledge, belief, or recollection.

**Who Must Notify?** Section 9002 of RCRA, as amended, requires that, unless exempted, owners of underground tanks that store regulated substances must notify designated State or local agencies of the existence of their tanks. Owner means:

- (a) in the case of any underground storage tank in use on November 8, 1984, or brought into use after that date, any person who owned an underground storage tank used for the storage, use, or dispensing of regulated substances; and
- (b) in the case of any underground storage tank in use before November 8, 1984, but no longer in use on that date, any person who owned such tank immediately before the discontinuation of its use.

**What Tanks Are Included?** Underground storage tank is defined as any one or combination of tanks that (1) is used to contain an accumulation of "regulated substances," and (2) whose volume (including connected underground piping) is 10% or more beneath the ground. Some examples are underground tanks storing: 1. gasoline, used oil, or diesel fuel, and 2. industrial solvents, pesticides, herbicides or fumigants.

**What Tanks Are Excluded?** Tanks removed from the ground are not subject to notification. Other tanks excluded from notification are:

- 1. farm or residential tanks of 1,100 gallons or less capacity used for storing motor fuel for noncommercial purposes;
- 2. tanks used for storing heating oil for consumptive use on the premises where stored;
- 3. septic tanks;

4. pipeline facilities (including gathering lines) regulated under the Natural Gas Pipeline Safety Act of 1968, or the Hazardous Liquid Pipeline Safety Act of 1979, or which is an intrastate pipeline facility regulated under State laws;
5. surface impoundments, pits, ponds, or lagoons;
6. storm water or waste water collection systems;
7. flow-through process tanks;
8. liquid traps or associated gathering lines directly related to oil or gas production and gathering operations;
9. storage tanks situated in an underground area (such as a basement, cellar, mineworkings, drift, shaft, or tunnel) if the storage tank is situated upon or above the surface of the floor.

**What Substances Are Covered?** The notification requirements apply to underground storage tanks that contain regulated substances. This includes any substance defined as hazardous in section 101 (14) of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA), with the exception of those substances regulated as hazardous waste under Subtitle C of RCRA. It also includes petroleum, e.g., crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute).

**Where To Notify?** Completed notification forms should be sent to the address given at the top of this page.

**When To Notify?** 1. Owners of underground storage tanks in use or that have been taken out of operation after January 1, 1974, but still in the ground, must notify by May 8, 1986. 2. Owners who bring underground storage tanks into use after May 8, 1986, must notify within 30 days of bringing the tanks into use.

**Penalties:** Any owner who knowingly fails to notify or submits false information shall be subject to a civil penalty not to exceed \$10,000 for each tank for which notification is not given or for which false information is submitted.

## INSTRUCTIONS

Please type or print in ink all items except "signature" in Section V. This form must be completed for each location containing underground storage tanks. If more than 5 tanks are owned at this location, photocopy the reverse side, and staple continuation sheets to this form.

Indicate number of continuation sheets attached

## INFORMATION

Notification is required by Federal law for all underground tanks that have been used to store regulated substances since January 1, 1974, that are in the ground as of May 8, 1986, or that are brought into use after May 8, 1986. The information requested is required by Section 9002 of the Resource Conservation and Recovery Act, (RCRA), as amended.

The primary purpose of this notification program is to locate and evaluate underground tanks that store or have stored petroleum or hazardous substances. It is expected that the information you provide will be based on reasonably available records, or, in the absence of such records, your knowledge, belief, or recollection.

**Who Must Notify?** Section 9002 of RCRA, as amended, requires that, unless exempted, owners of underground tanks that store regulated substances must notify designated State or local agencies of the existence of their tanks. Owner means—

(a) in the case of an underground storage tank in use on November 8, 1984, or brought into use after that date, any person who owns an underground storage tank used for the storage, use, or dispensing of regulated substances; and

(b) in the case of any underground storage tank in use before November 8, 1984, but no longer in use on that date, any person who owned such tank immediately before the discontinuation of its use.

**What Tanks Are Included?** Underground storage tank is defined as any one or combination of tanks that (1) is used to contain an accumulation of "regulated substances," and (2) whose volume (including connected underground piping) is 10% or more beneath the ground. Some examples are underground tanks storing: 1. gasoline, used oil, or diesel fuel, and 2. industrial solvents, pesticides, herbicides or fumigants.

**What Tanks Are Excluded?** Tanks removed from the ground are not subject to notification. Other tanks excluded from notification are:

1. farm or residential tanks of 1,100 gallons or less capacity used for storing motor fuel for noncommercial purposes;

2. tanks used for storing heating oil for consumptive use on the premises where stored;

3. septic tanks;

4. pipeline facilities (including gathering lines) regulated under the Natural Gas Pipeline Safety Act of 1968, or the Hazardous Liquid Pipeline Safety Act of 1979, or which is an intrastate pipeline facility regulated under State laws;

5. surface impoundments, pits, ponds, or lagoons;

6. storm water or waste water collection systems;

7. flow-through process tanks;

8. liquid traps or associated gathering lines directly related to oil or gas production and gathering operations;

9. storage tanks situated in an underground area (such as a basement, cellar, mineworking, drift, shaft, or tunnel) if the storage tank is situated upon or above the surface of the floor.

**What Substances Are Covered?** The notification requirements apply to underground storage tanks that contain regulated substances. This includes any substance defined as hazardous in section 101 (14) of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA), with the exception of those substances regulated as hazardous waste under Subtitle C of RCRA. It also includes petroleum, e.g., crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute).

**Where To Notify?** Completed notification forms should be sent to the address given at the top of this page.

**When To Notify?** 1. Owners of underground storage tanks in use or that have been taken out of operation after January 1, 1974, but still in the ground, must notify by May 8, 1986. 2. Owners who bring underground storage tanks into use after May 8, 1986, must notify within 30 days of bringing the tanks into use.

**Penalties:** Any owner who knowingly fails to notify or submits false information shall be subject to a civil penalty not to exceed \$10,000 for each tank for which notification is not given or for which false information is submitted.

## INSTRUCTIONS

Please type or print in ink all items except "signature" in Section V. This form must be completed for each location containing underground storage tanks. If more than 5 tanks are owned at this location, photocopy the reverse side, and staple continuation sheets to this form.

Indicate number of continuation sheets attached

## I. OWNERSHIP OF TANK(S)

Owner Name (Corporation, Individual, Public Agency, or Other Entity)

ENYART ELECTRIC MOTOR SERVICE

Street Address

122 E. SAMPLE STREET

County

ST. JOSEPH

City State ZIP Code  
SOUTH BEND, IN 46618

Area Code Phone Number  
219 288-4732

Type of Owner (Mark all that apply  )

<input checked="" type="checkbox"/> Current	<input type="checkbox"/> State or Local Gov't	<input checked="" type="checkbox"/> Private or Corporate
<input type="checkbox"/> Former	<input type="checkbox"/> Federal Gov't (GSA facility I.D. no.)	<input type="checkbox"/> Ownership uncertain

## II. LOCATION OF TANK(S)

(If same as Section 1, mark box here  )

Facility Name or Company Site Identifier, as applicable

ENYART ELECTRIC MOTOR SERVICE

Street Address or State Road, as applicable

122 E. SAMPLE STREET

County

ST. JOSEPH

City (nearest) State ZIP Code  
SOUTH BEND, IN 46618

Indicate number of tanks at this location

Mark box here if tank(s) are located on land within an Indian reservation or on other Indian trust lands

Name (If same as Section I, mark box here  )

Job Title

Area Code

Phone Number

## IV. TYPE OF NOTIFICATION

Mark box here only if this is an amended or subsequent notification for this location.

## V. CERTIFICATION (Read and sign after completing Section VI.)

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete.

Name and official title of owner or owner's authorized representative

JOHN BAMBER FOR OWNER

Signature

Date Signed

DECEMBER 31, 1989
